

Town of Tecumseh Coastal Flood Risk Assessment

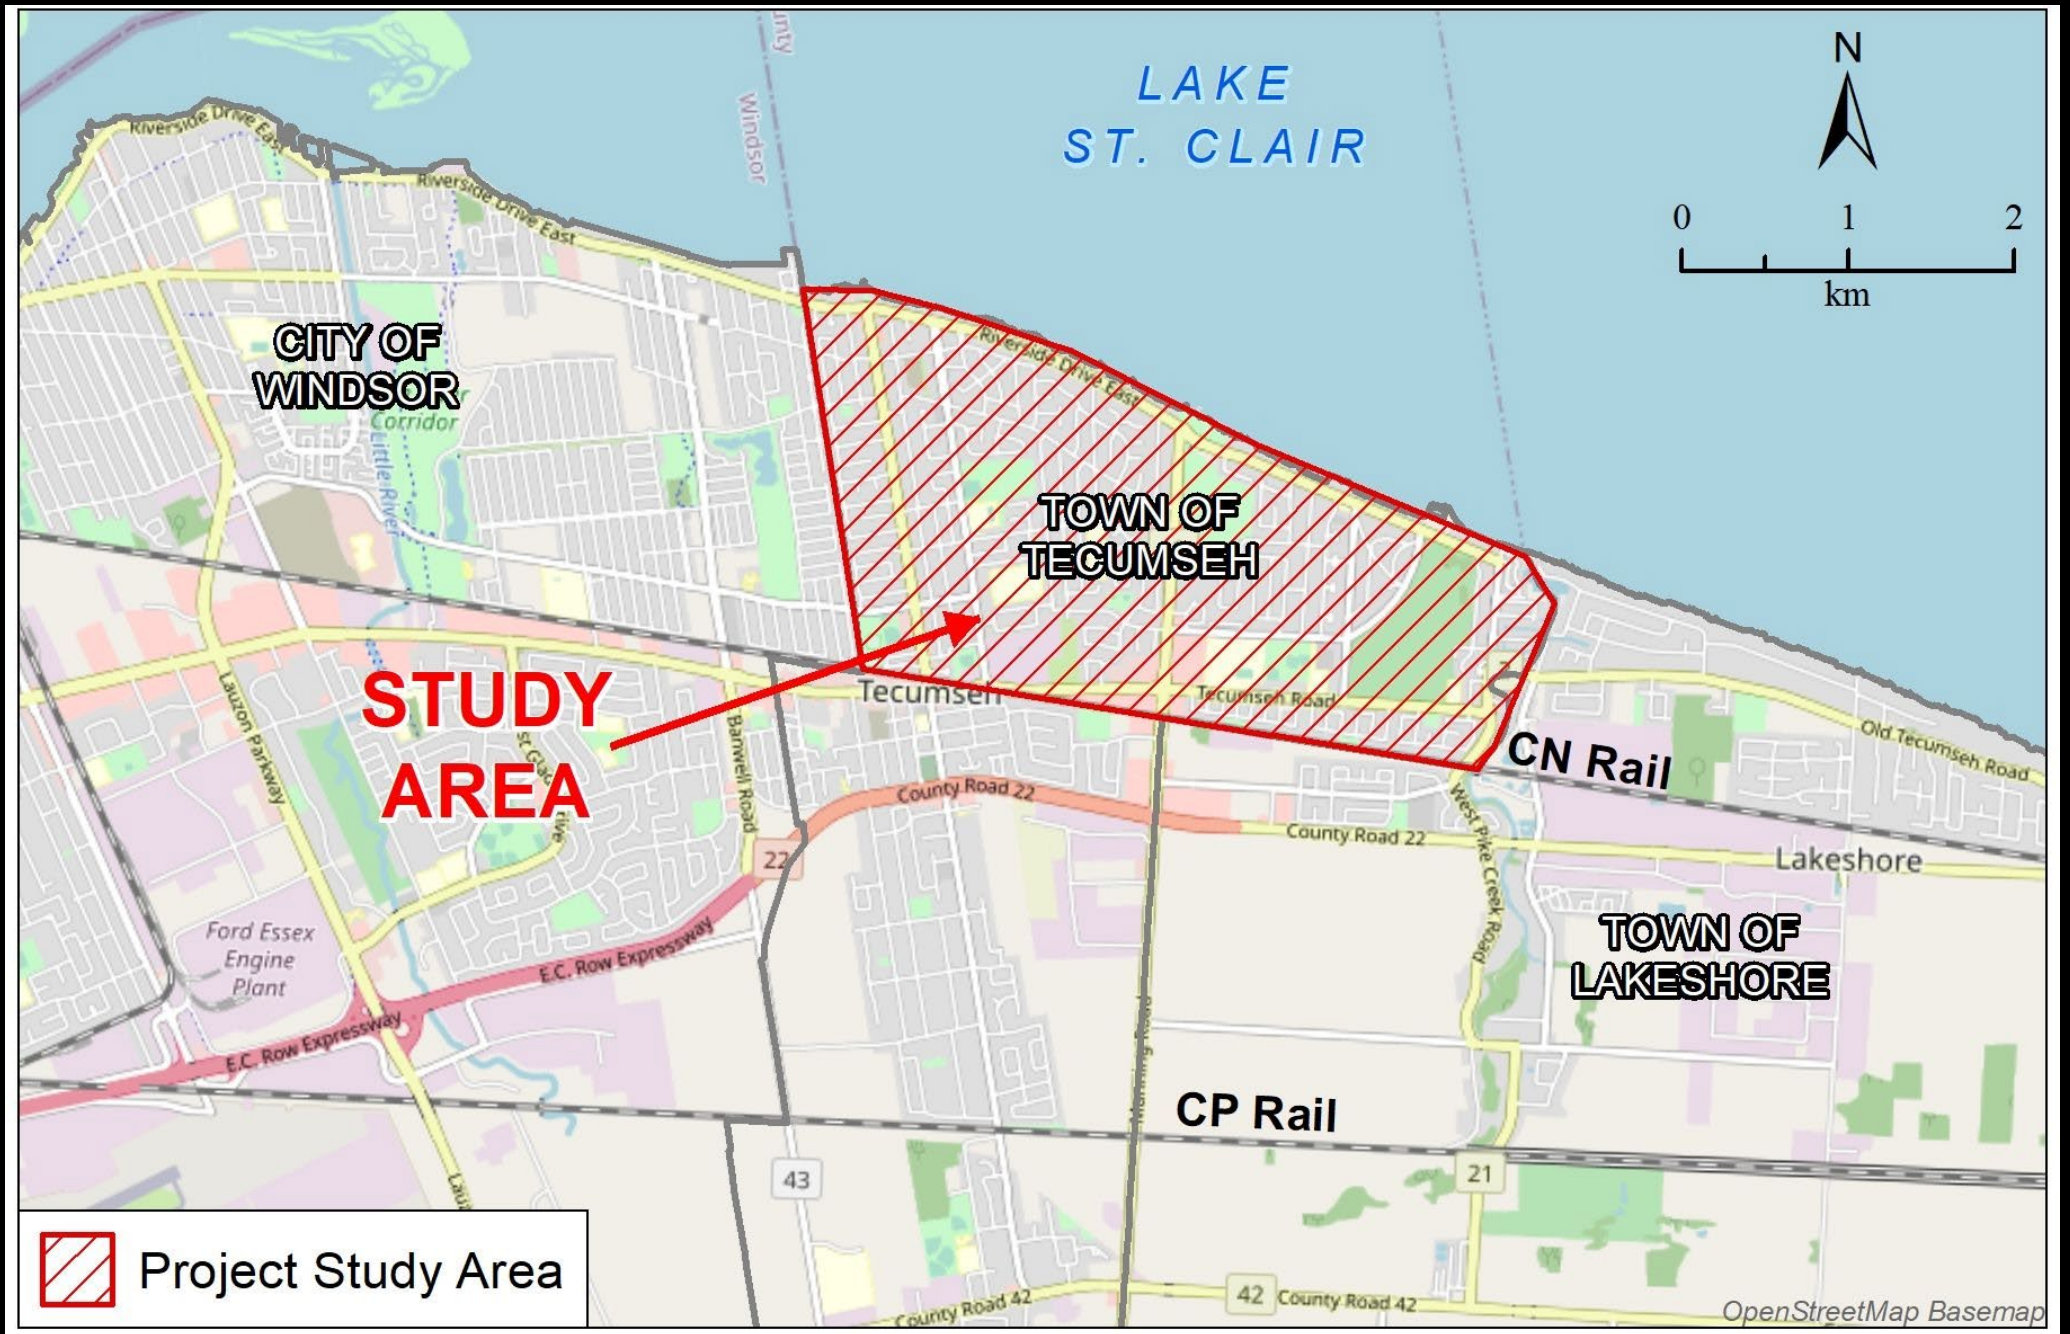

Council Presentation

February 2023

Study Area

PRESENTATION OVERVIEW

- Field Data Collection
- Coastal Hazard Analysis
- Flood Risk Assessment
- Adaptation Options
- Public Engagement
- Next Steps
- Questions

FIELD DATA COLLECTION

Sample of Oblique Photos

Pike Creek Jetties

West Project Boundary

Lakewood Park

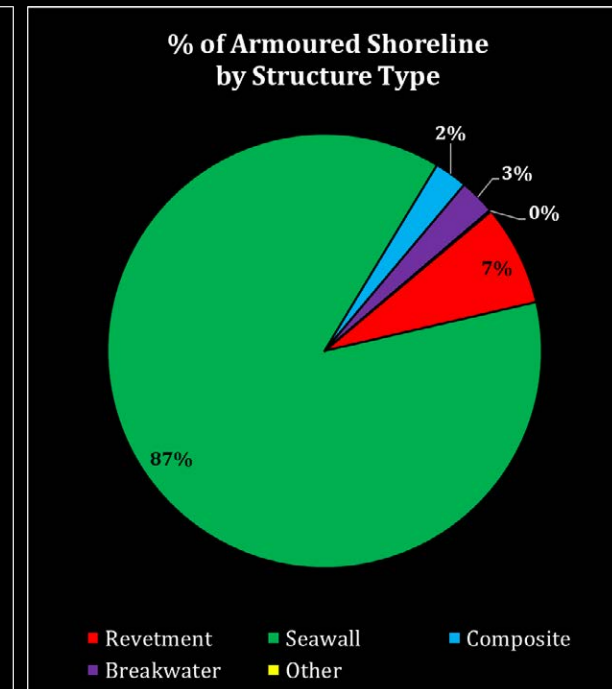

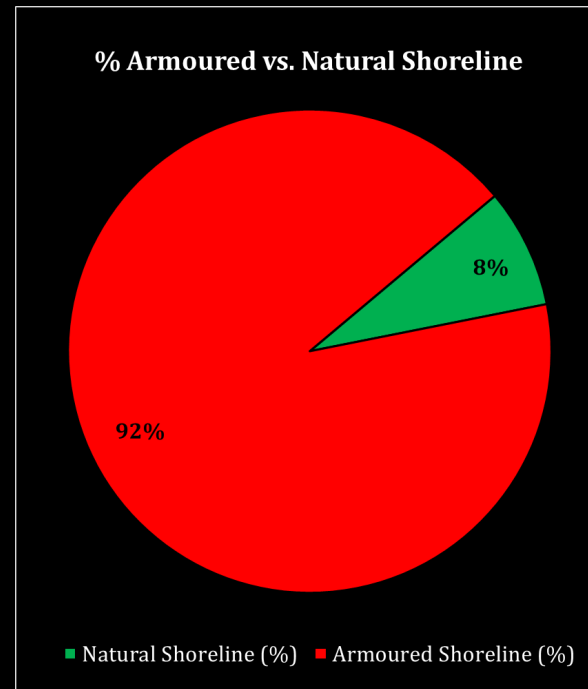

Chippewa Park

Shore Protection Database

- Shoreline protection database was assembled for the entire study shoreline from oblique photos
- Summary statistics:
 - Armoured vs. natural shoreline
 - Public versus private
 - Structure type
 - Structure condition

Sample Statistics:

Bathymetric Survey

- Lakebed depths and substrate logged using SOLIX™ 2D Sonar instrument

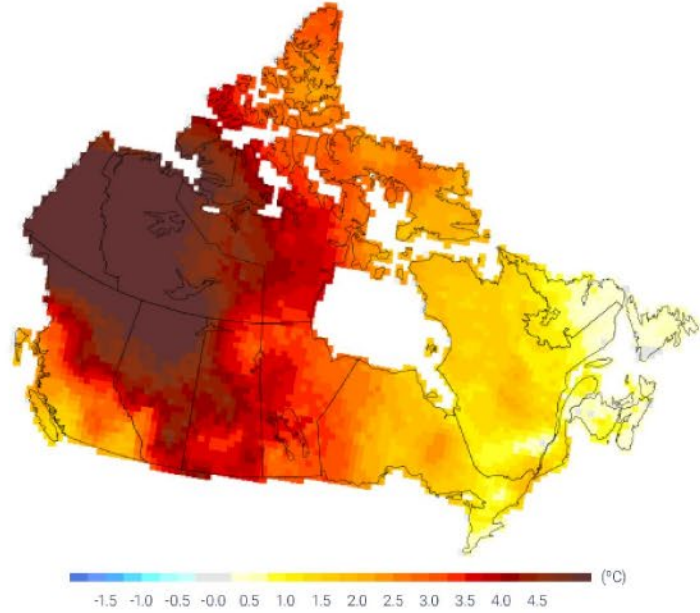

COASTAL HAZARD ANALYSIS

1948 to 2016 Winter Air Temperature Increase

Source: Vincent et al. 2015. In Zhang, X., Flato, G., Kirchmeier-Young, M., Vincent, L., Wan, H., Wang, X., Rong, R., Fyfe, J., Li, G., Kharin, V.V. (2019): Changes in Temperature and Precipitation Across Canada; Chapter 4 in Bush, E. and Lemmen, D.S. (Eds.) Canada's Changing Climate Report. Government of Canada, Ottawa, Ontario, pp 112-193.

2081-2100 Winter Warming Projection for RCP8.5

Source: Climate Research Division, Environment and Climate Change Canada. In Zhang, X., Flato, G., Kirchmeier-Young, M., Vincent, L., Wan, H., Wang, X., Rong, R., Fyfe, J., Li, G., Kharin, V.V. (2019): Changes in Temperature and Precipitation Across Canada; Chapter 4 in Bush, E. and Lemmen, D.S. (Eds.) Canada's Changing Climate Report. Government of Canada, Ottawa, Ontario, pp 112-193.

Historical Water Levels, 100-year Flood Level, and 100-year Climate Change Flood Level

Lake St. Clair Monthly Mean Lake Levels - 1918 to 2019

Analysis of Storm Waves

- Wave hindcast performed to predict wave generation over Lake St. Clair during extreme wind events (i.e., 100-year, etc.) from Windsor Airport
 - Validated against available wave buoy data (2000 – 2019, intermittent)

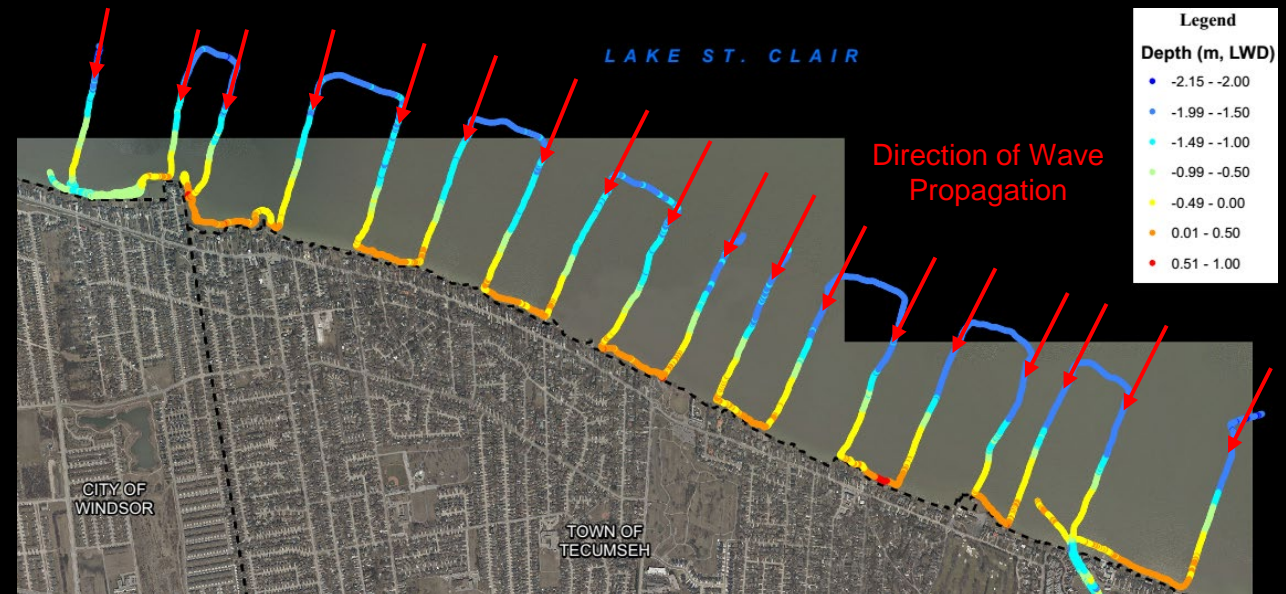

RP (years)	Wind Speed (km/hr)	1977 SPM – Shallow Water	
		Wave Height (m)	Wave Period (s)
1.5	66.07	1.30	4.7
2	67.53	1.32	4.7
5	71.82	1.37	4.8
10	75.33	1.42	4.9
20	79.31	1.46	5.0
25	80.72	1.48	5.0
50	85.54	1.53	5.2
100	91.18	1.59	5.3
200	97.78	1.65	5.4
500	108.30	1.75	5.7

Analysis of Storm Waves

- Offshore waves transformed to Tecumseh shoreline at each bathymetric profile
 - Includes effects of shoaling, refraction and wave breaking
- 100-year wave conditions output at toe of shoreline protection & beaches
 - Used in wave runup and overtopping calculations to inform flood mapping
 - Used in development of risk mitigation concepts, including recommendations for shoreline protection structures

Combined Rainfall and Coastal Flooding Events (wave overtopping)

- Leverage results from Dillon (2019) for rainfall flood risk
- Roughly 70% of the historical coastal storm events featured some rainfall
- Storms with coastal flooding and rainfall will be evaluated

FLOOD RISK ASSESSMENT

*“4 feet of water on
Riverside Drive”*

Windsor Star

Historical Context: Saint Patrick's Day Storm of 1973

- Major coastal storm on March 17, 1973
- Peak water level at Belle River reached +176.19 m IGLD85'
 - 4 cm below predicted 100-year flood level
 - Mean Lake Level = +175.83 (50-year for March)
 - Storm Surge = 0.36 m (25-year)
 - Significant wave height event

St. Clair Beach Police Station

Riverside Drive

Tecumseh Road

Arlington Blvd.

PROPERTY PARCEL DATABASE

Legend

Parcel Database

- Residential
- Commercial
- Institutional
- Industrial
- Recreational
- Elevation Contour
- Project Study Area
- Municipal Boundary

Parcel Database
Collection of Estimated First Floor Elevations

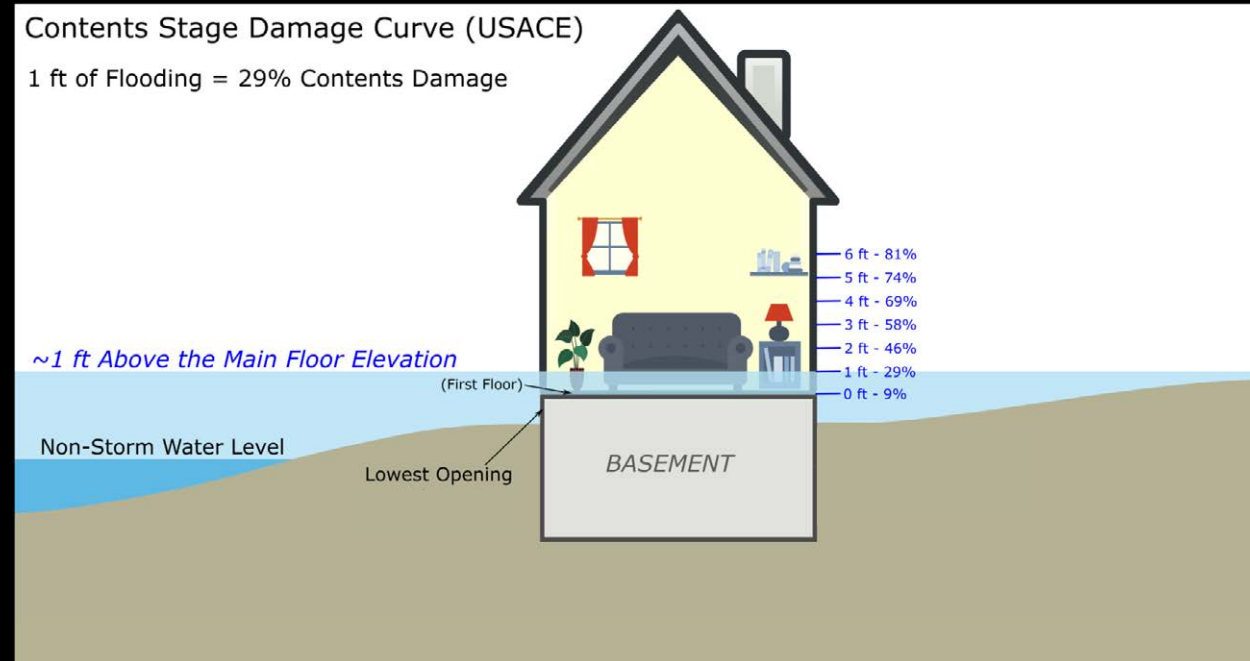

Town of Tecumseh

Data Sources:
 1) 2019 ortho provided by the County of Essex.

Flood Damage Methodology

- Property value based on current assessment value (not market value)
- Building and content damages increase with the depth of flooding above the first floor (USACE methodology in graphics below)

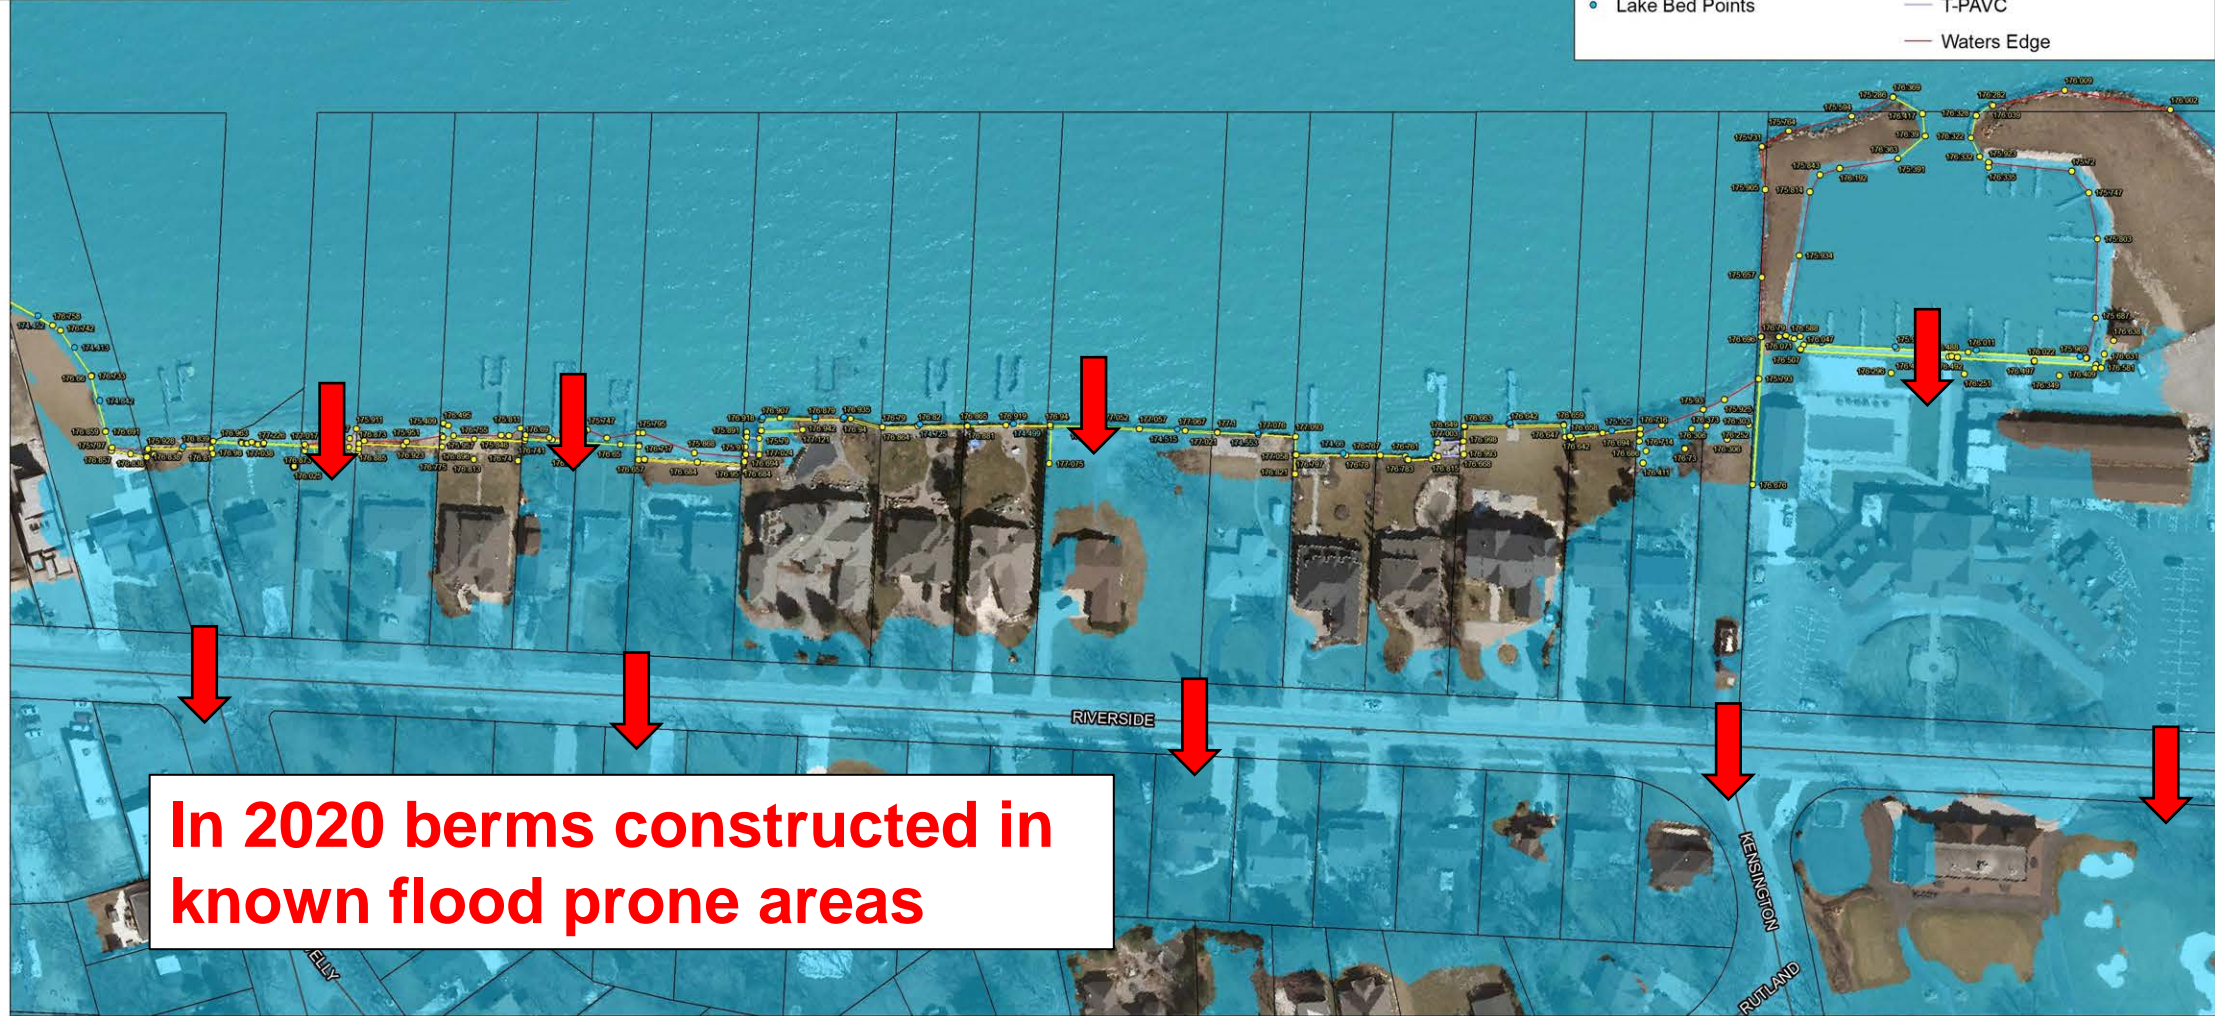

Wave Overtopping Pushes Water over the Shore Protection and onto Riverside Drive

FLOOD PATHWAYS

In 2020 berms constructed in known flood prone areas

Legend

- Parcels
- 100-year Combined Flood Level
- JD Barnes Survey - CAD Lines
 - Other
 - BLOCKS
 - Crest - Wall
 - G-DIMARR
 - T-PAVC
 - Waters Edge
- JD Barnes Survey - CAD Points
 - Other

 - Lake Bed Points

Road Elevation versus Flood Elevation

Riverside Drive Elevation vs Flood Level (west to east)

Road Elevation versus Flood Elevation

Lesperance Road Elevation vs Flood Level (north to south)

SCENARIO A FLOOD ANIMATION (30 hours)

110 Buildings with first floor flooding, \$24-\$37 million

SCENARIO C FLOOD ANIMATION (30 hours)

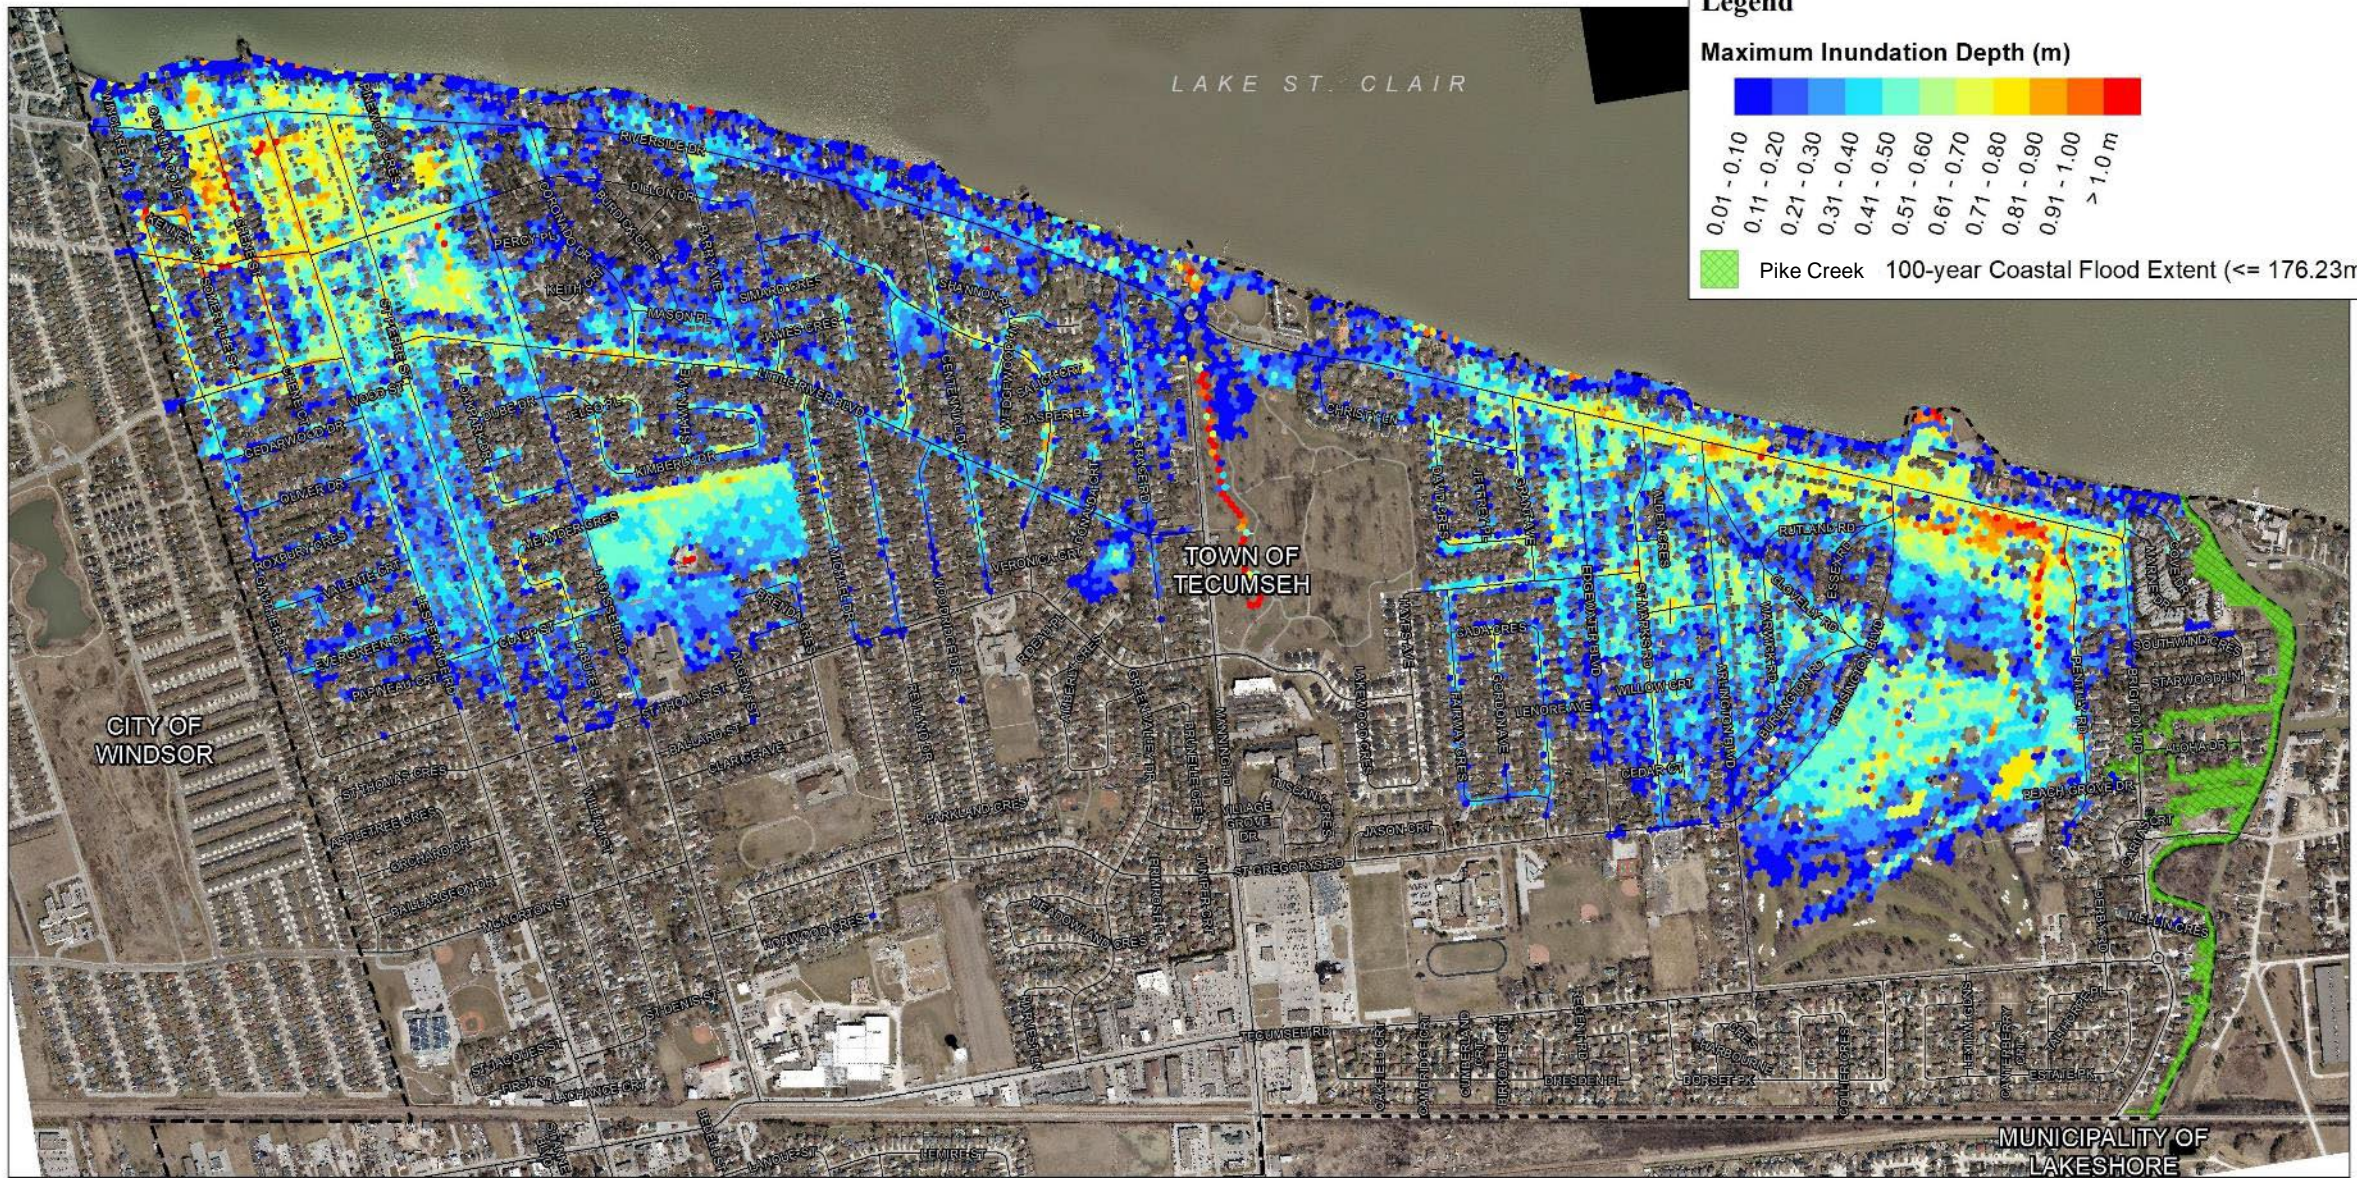

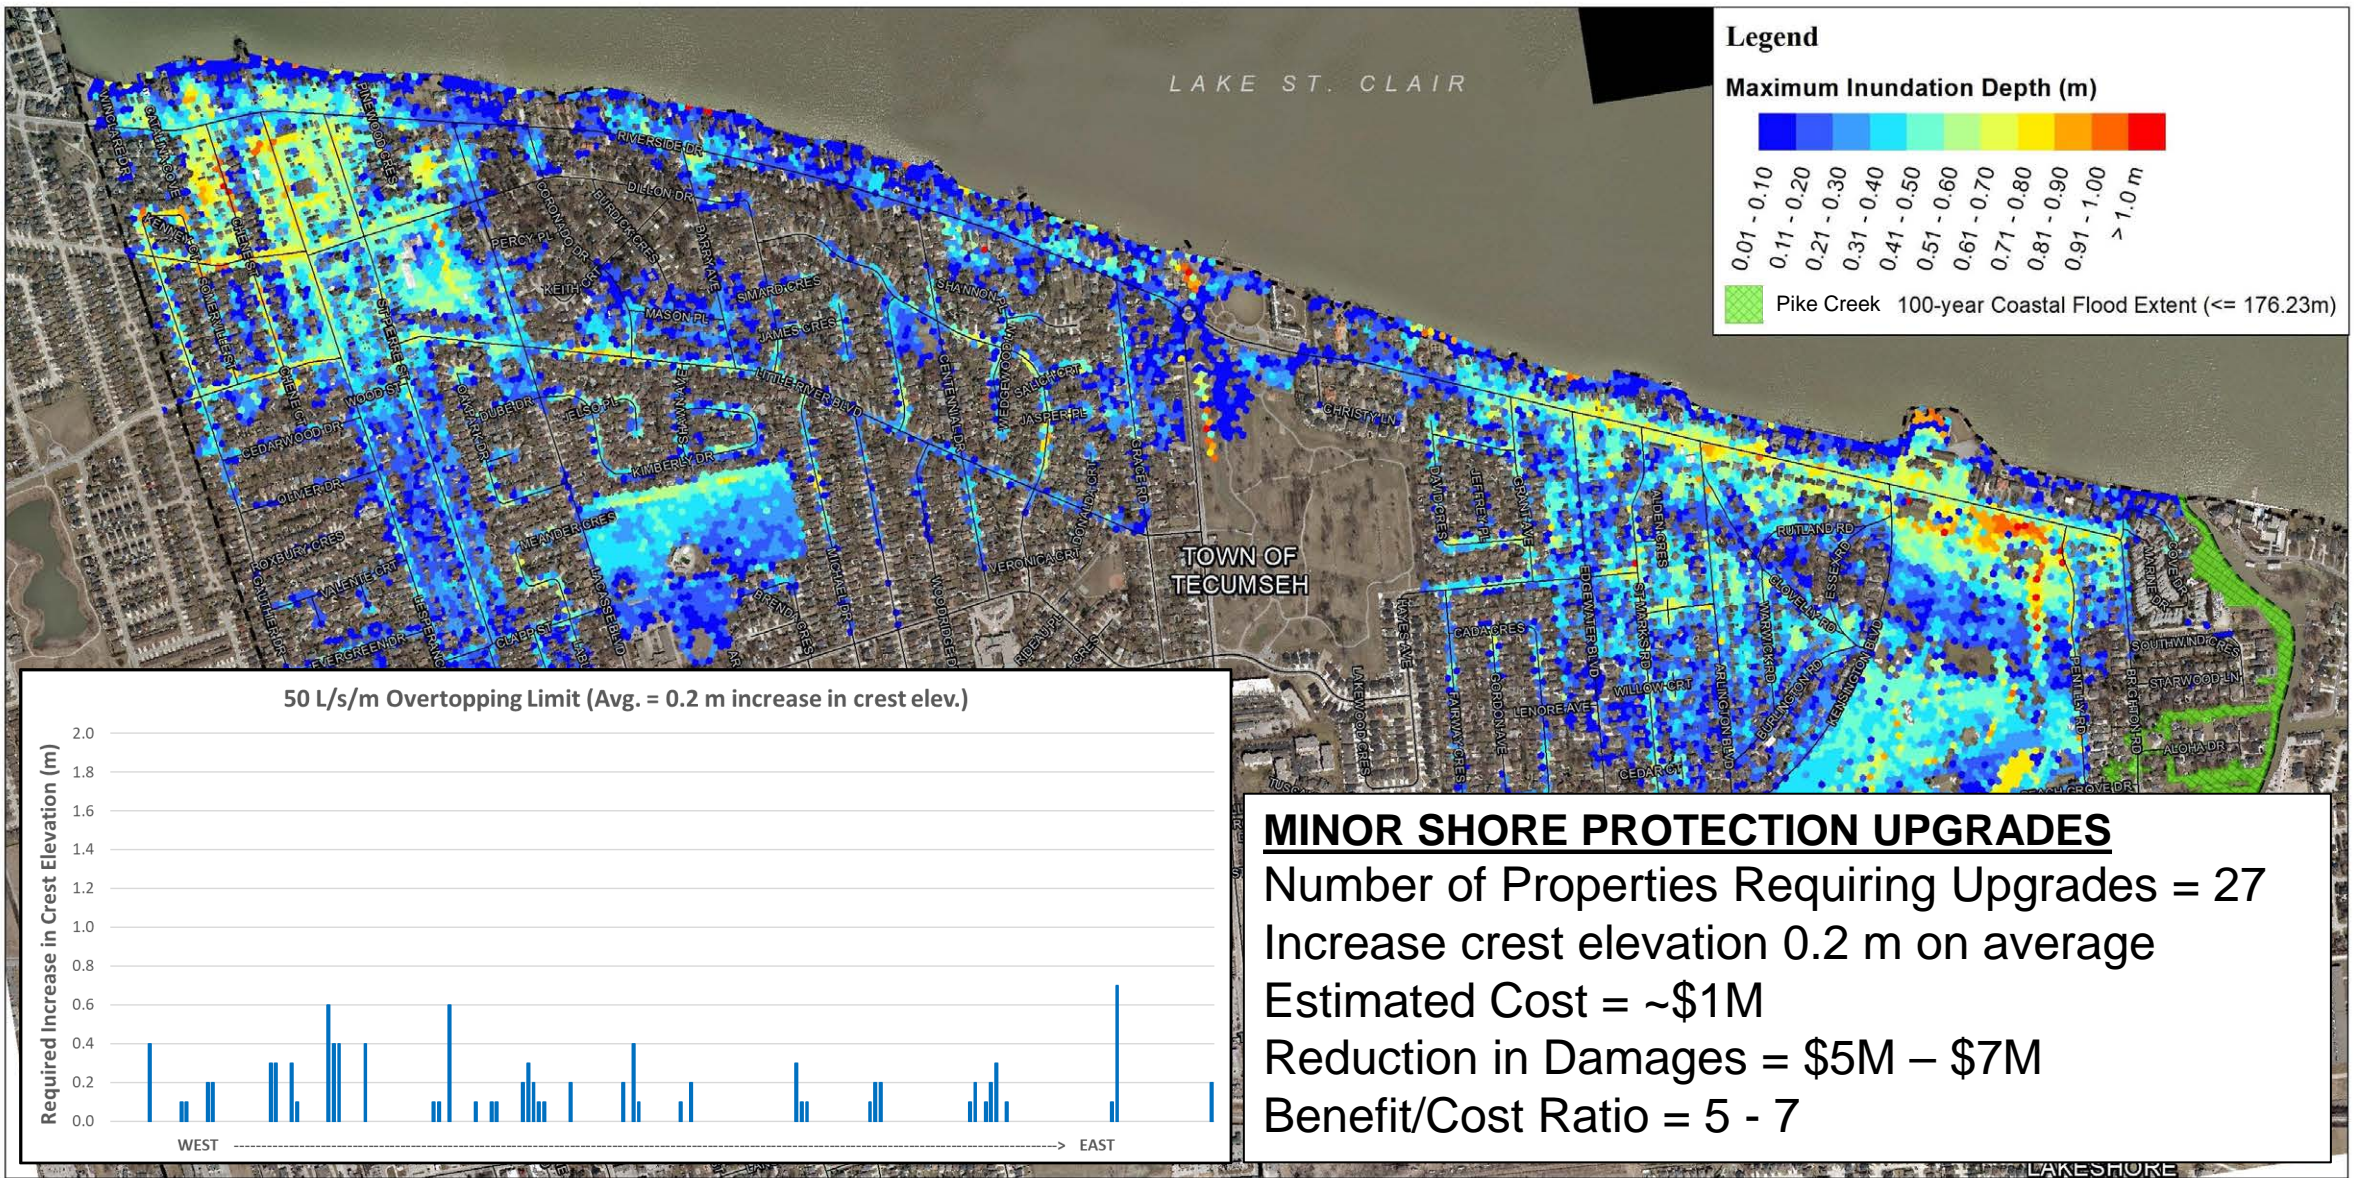

730 Buildings with first floor flooding, \$124-\$188 million

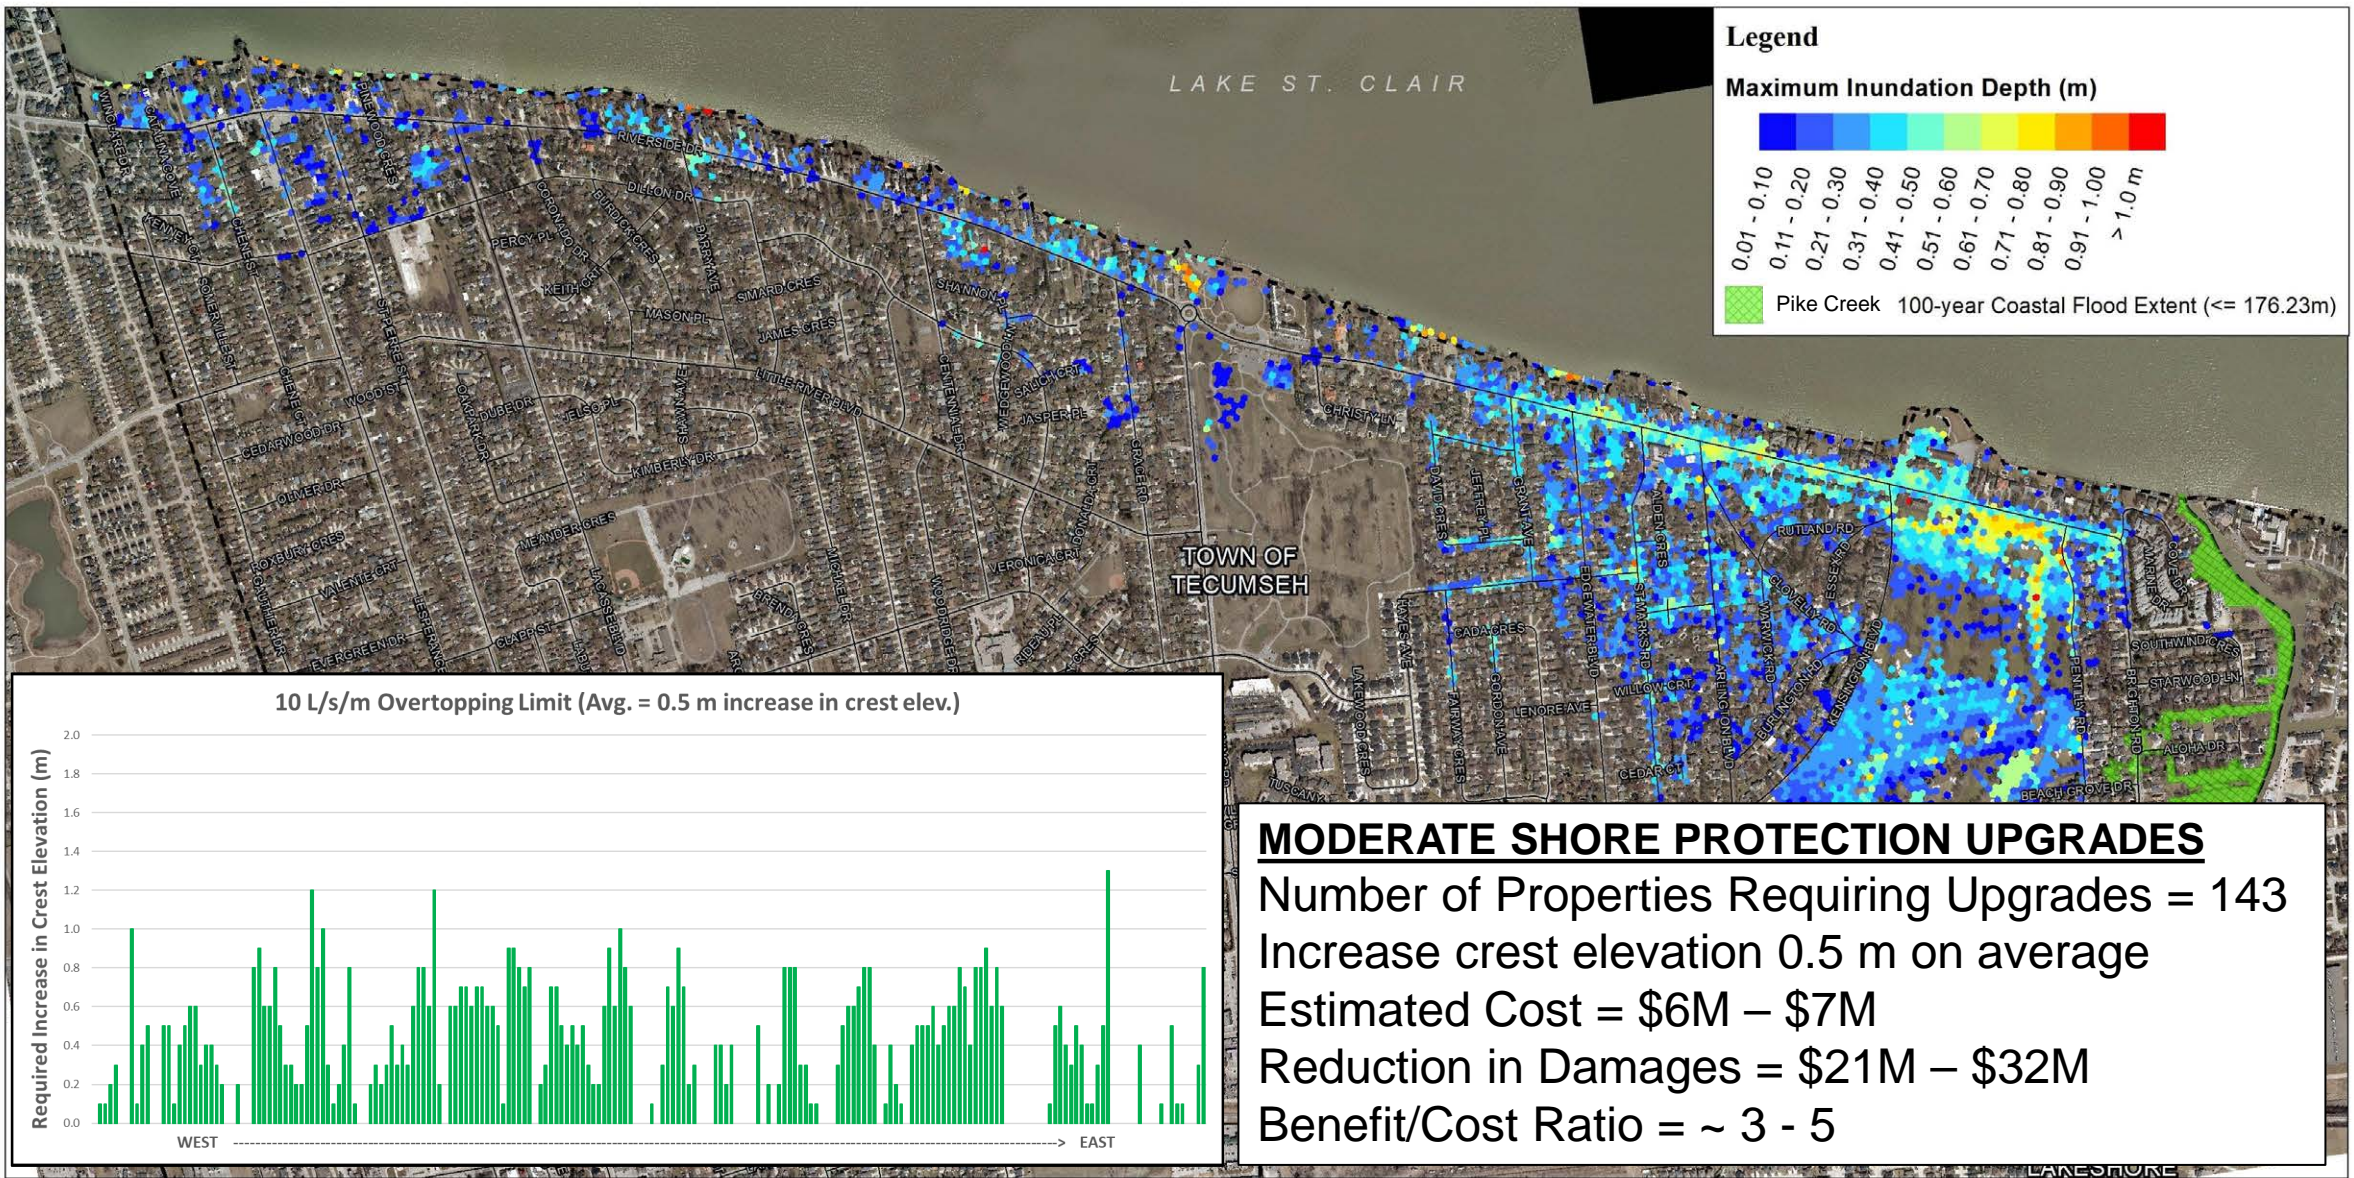

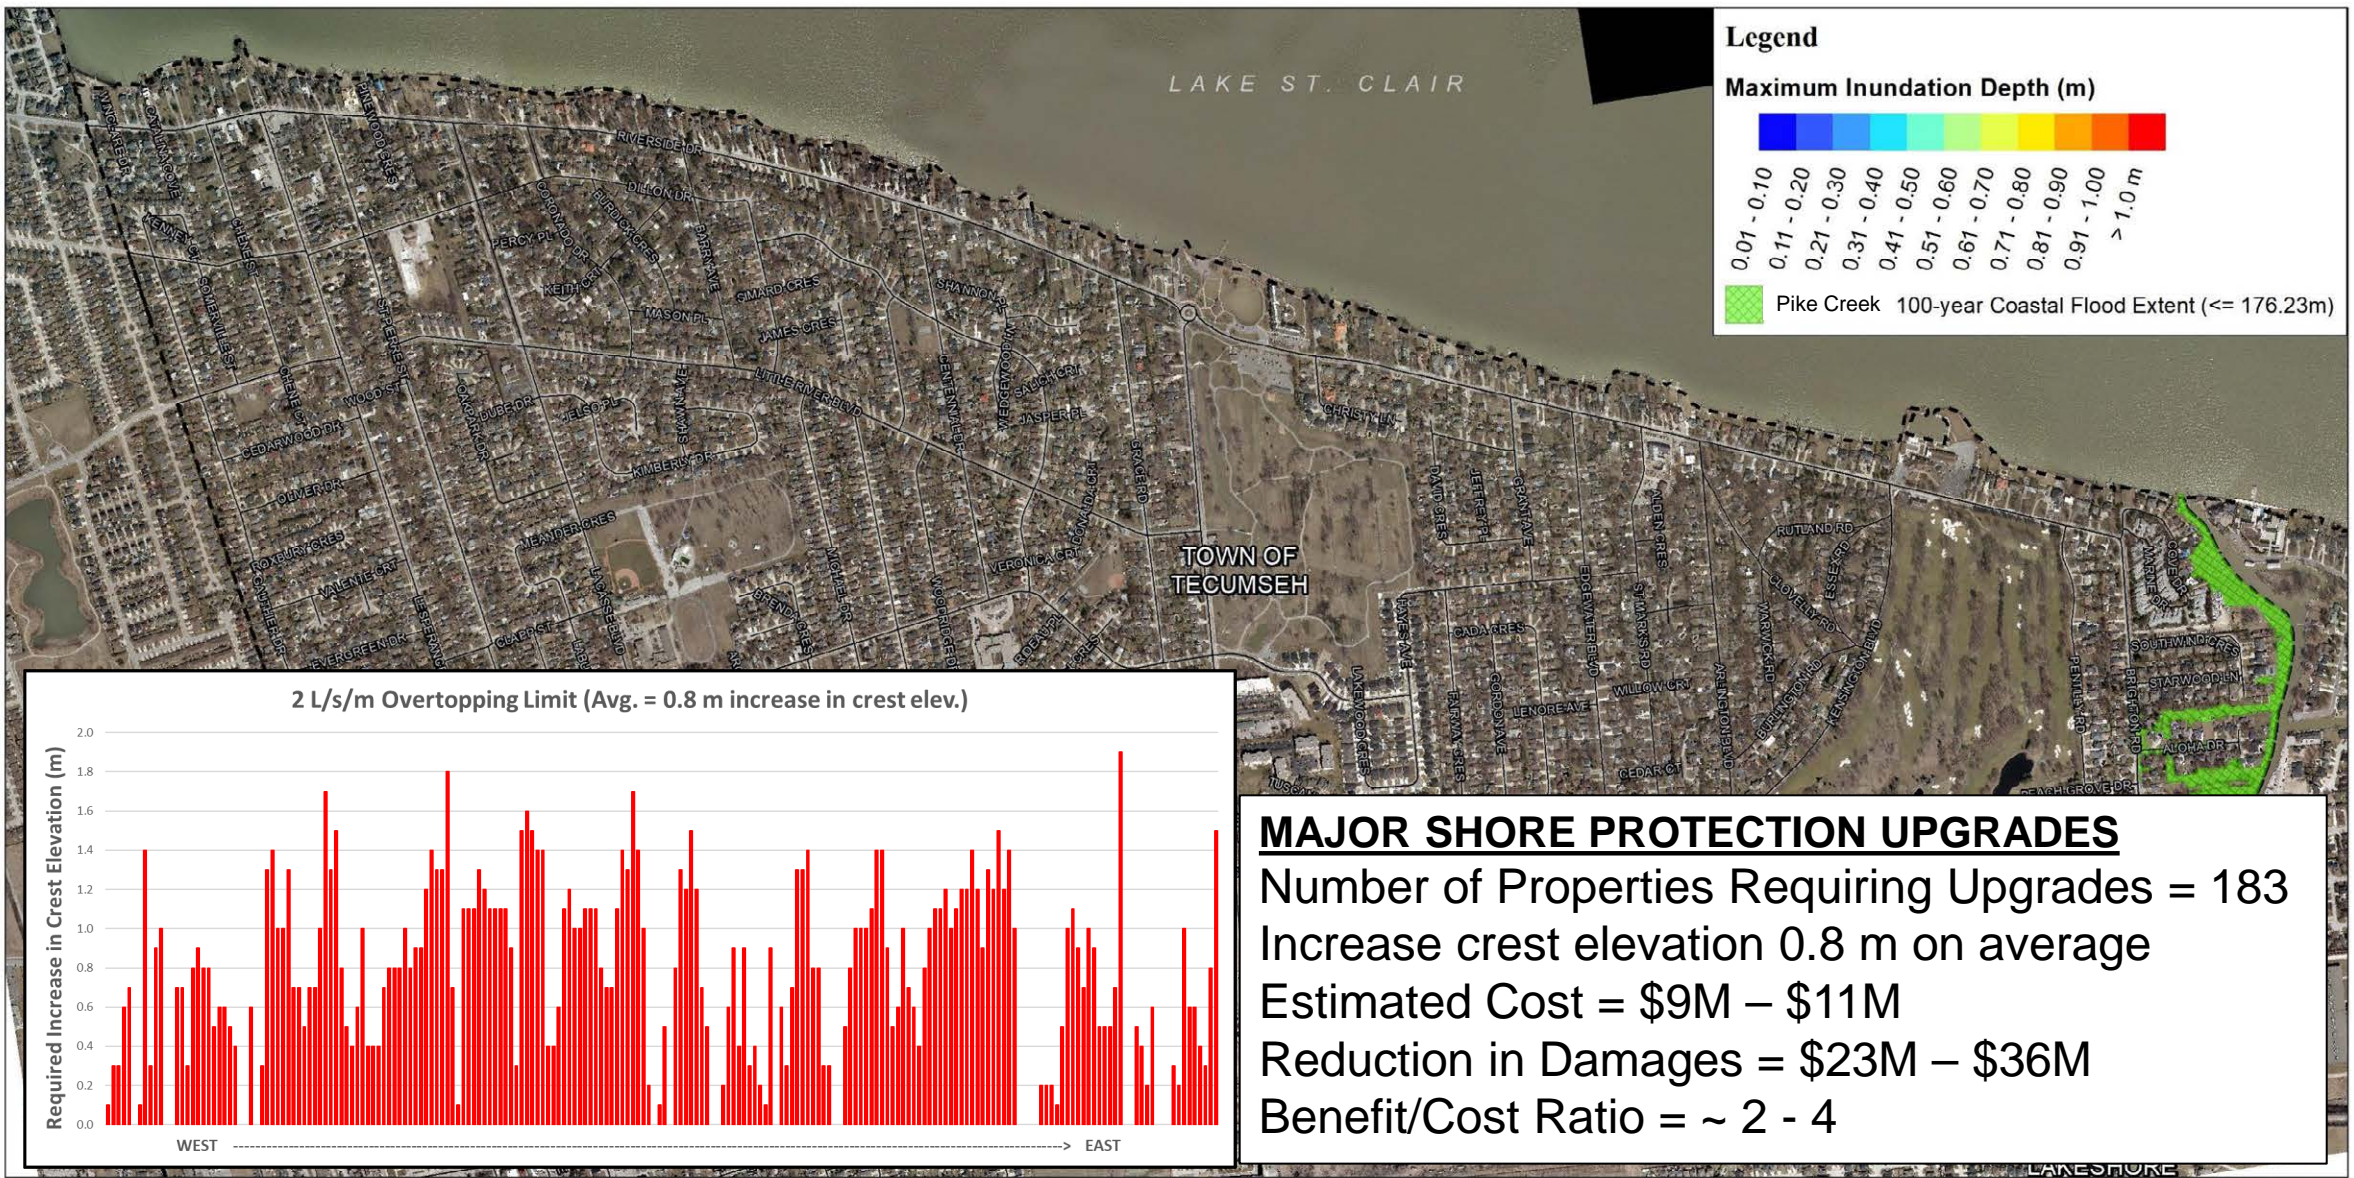

ADAPTATION OPTIONS TO REDUCE FLOOD RISK AND FUTURE DAMAGES

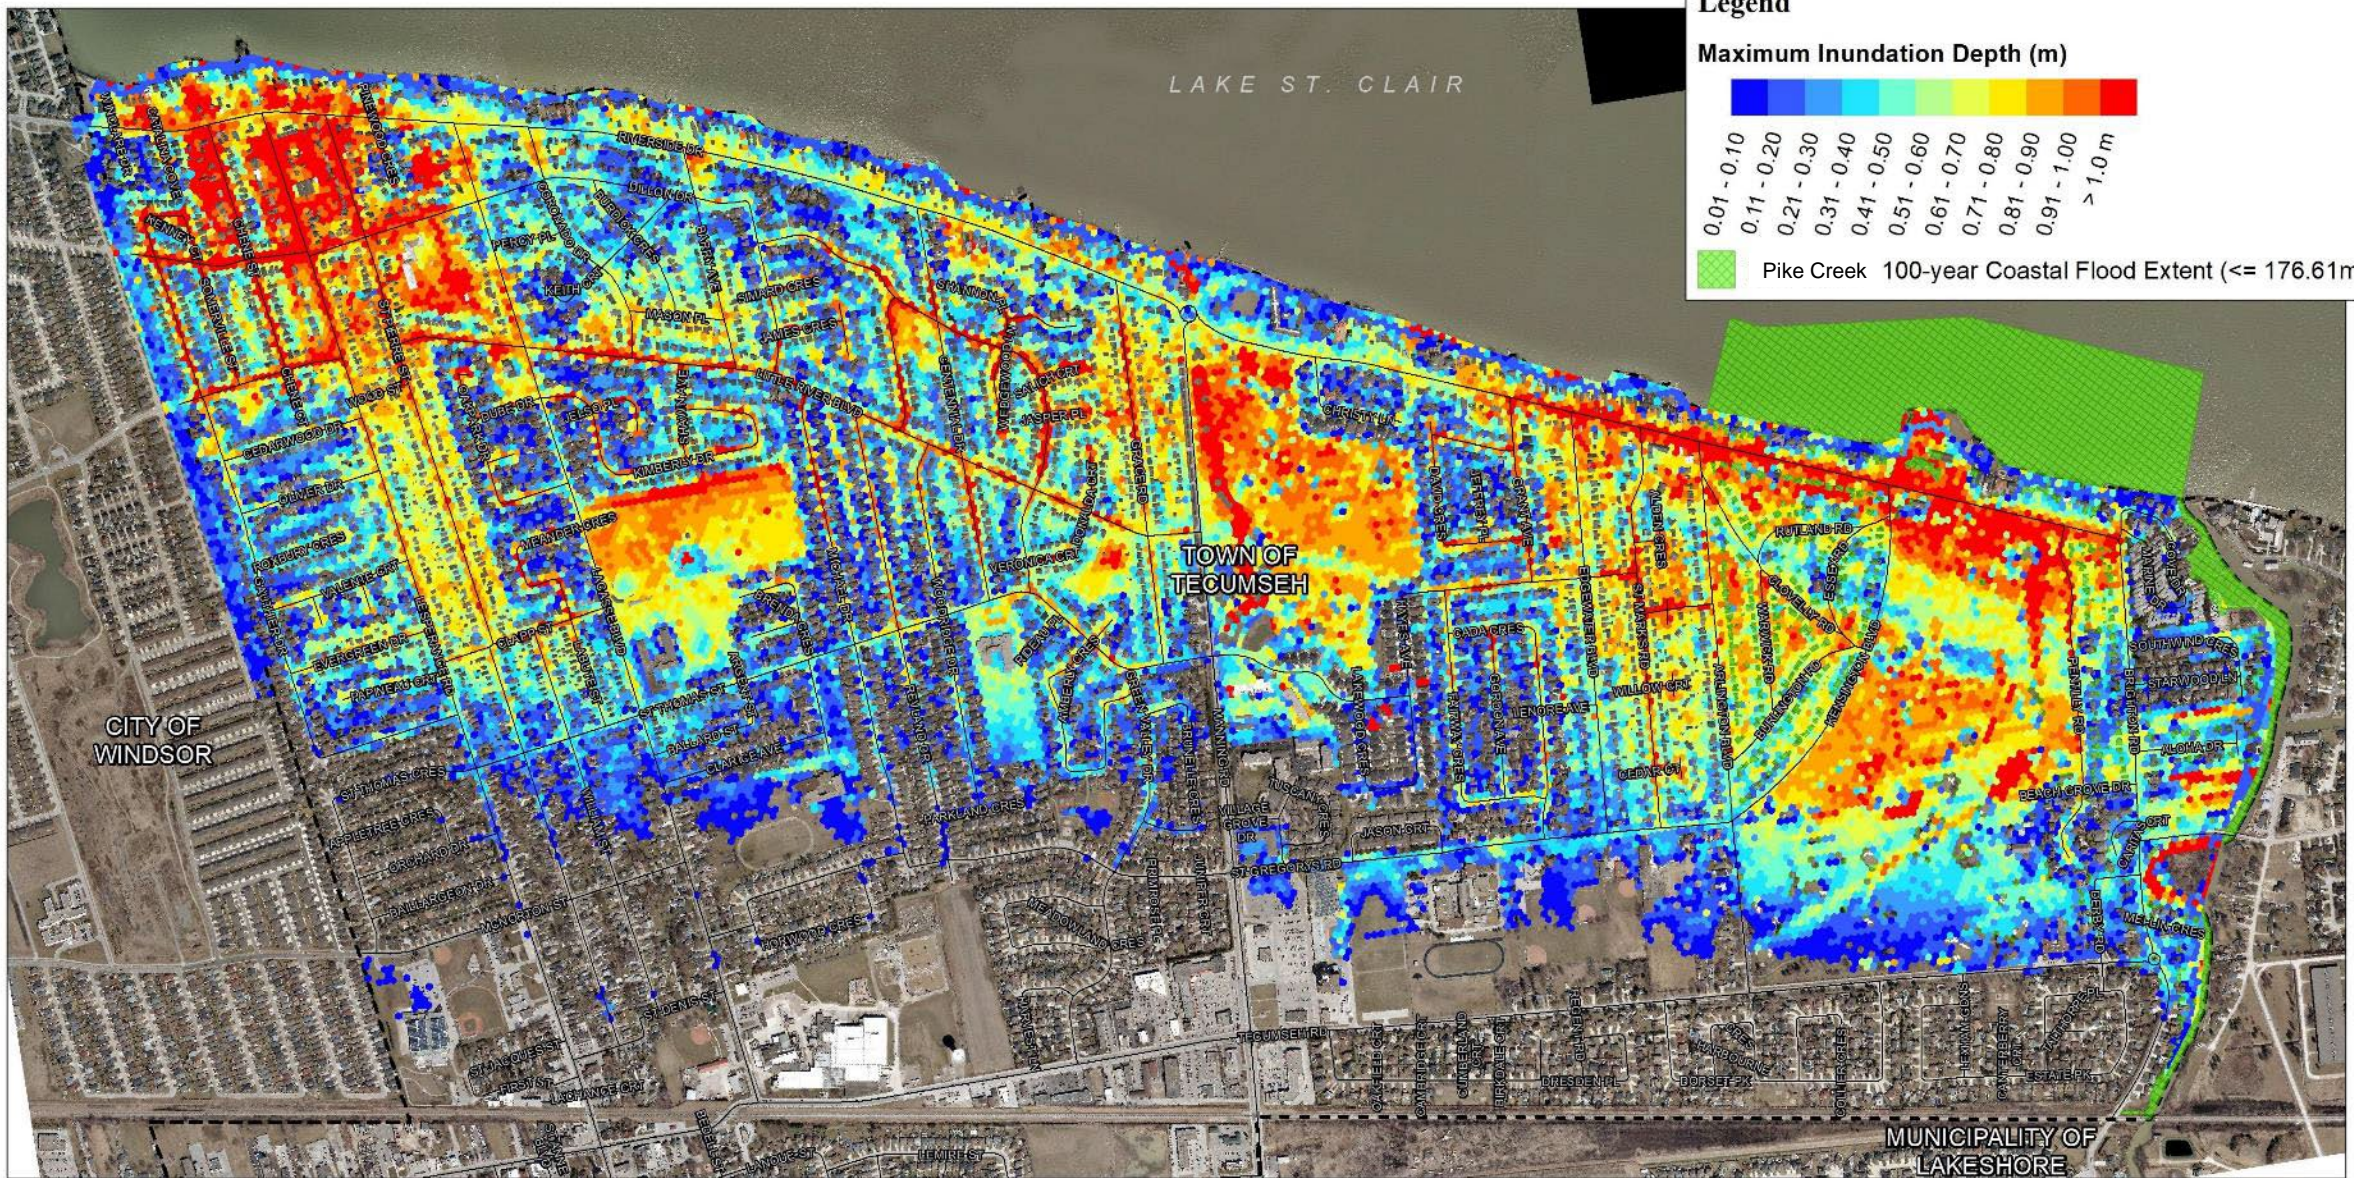

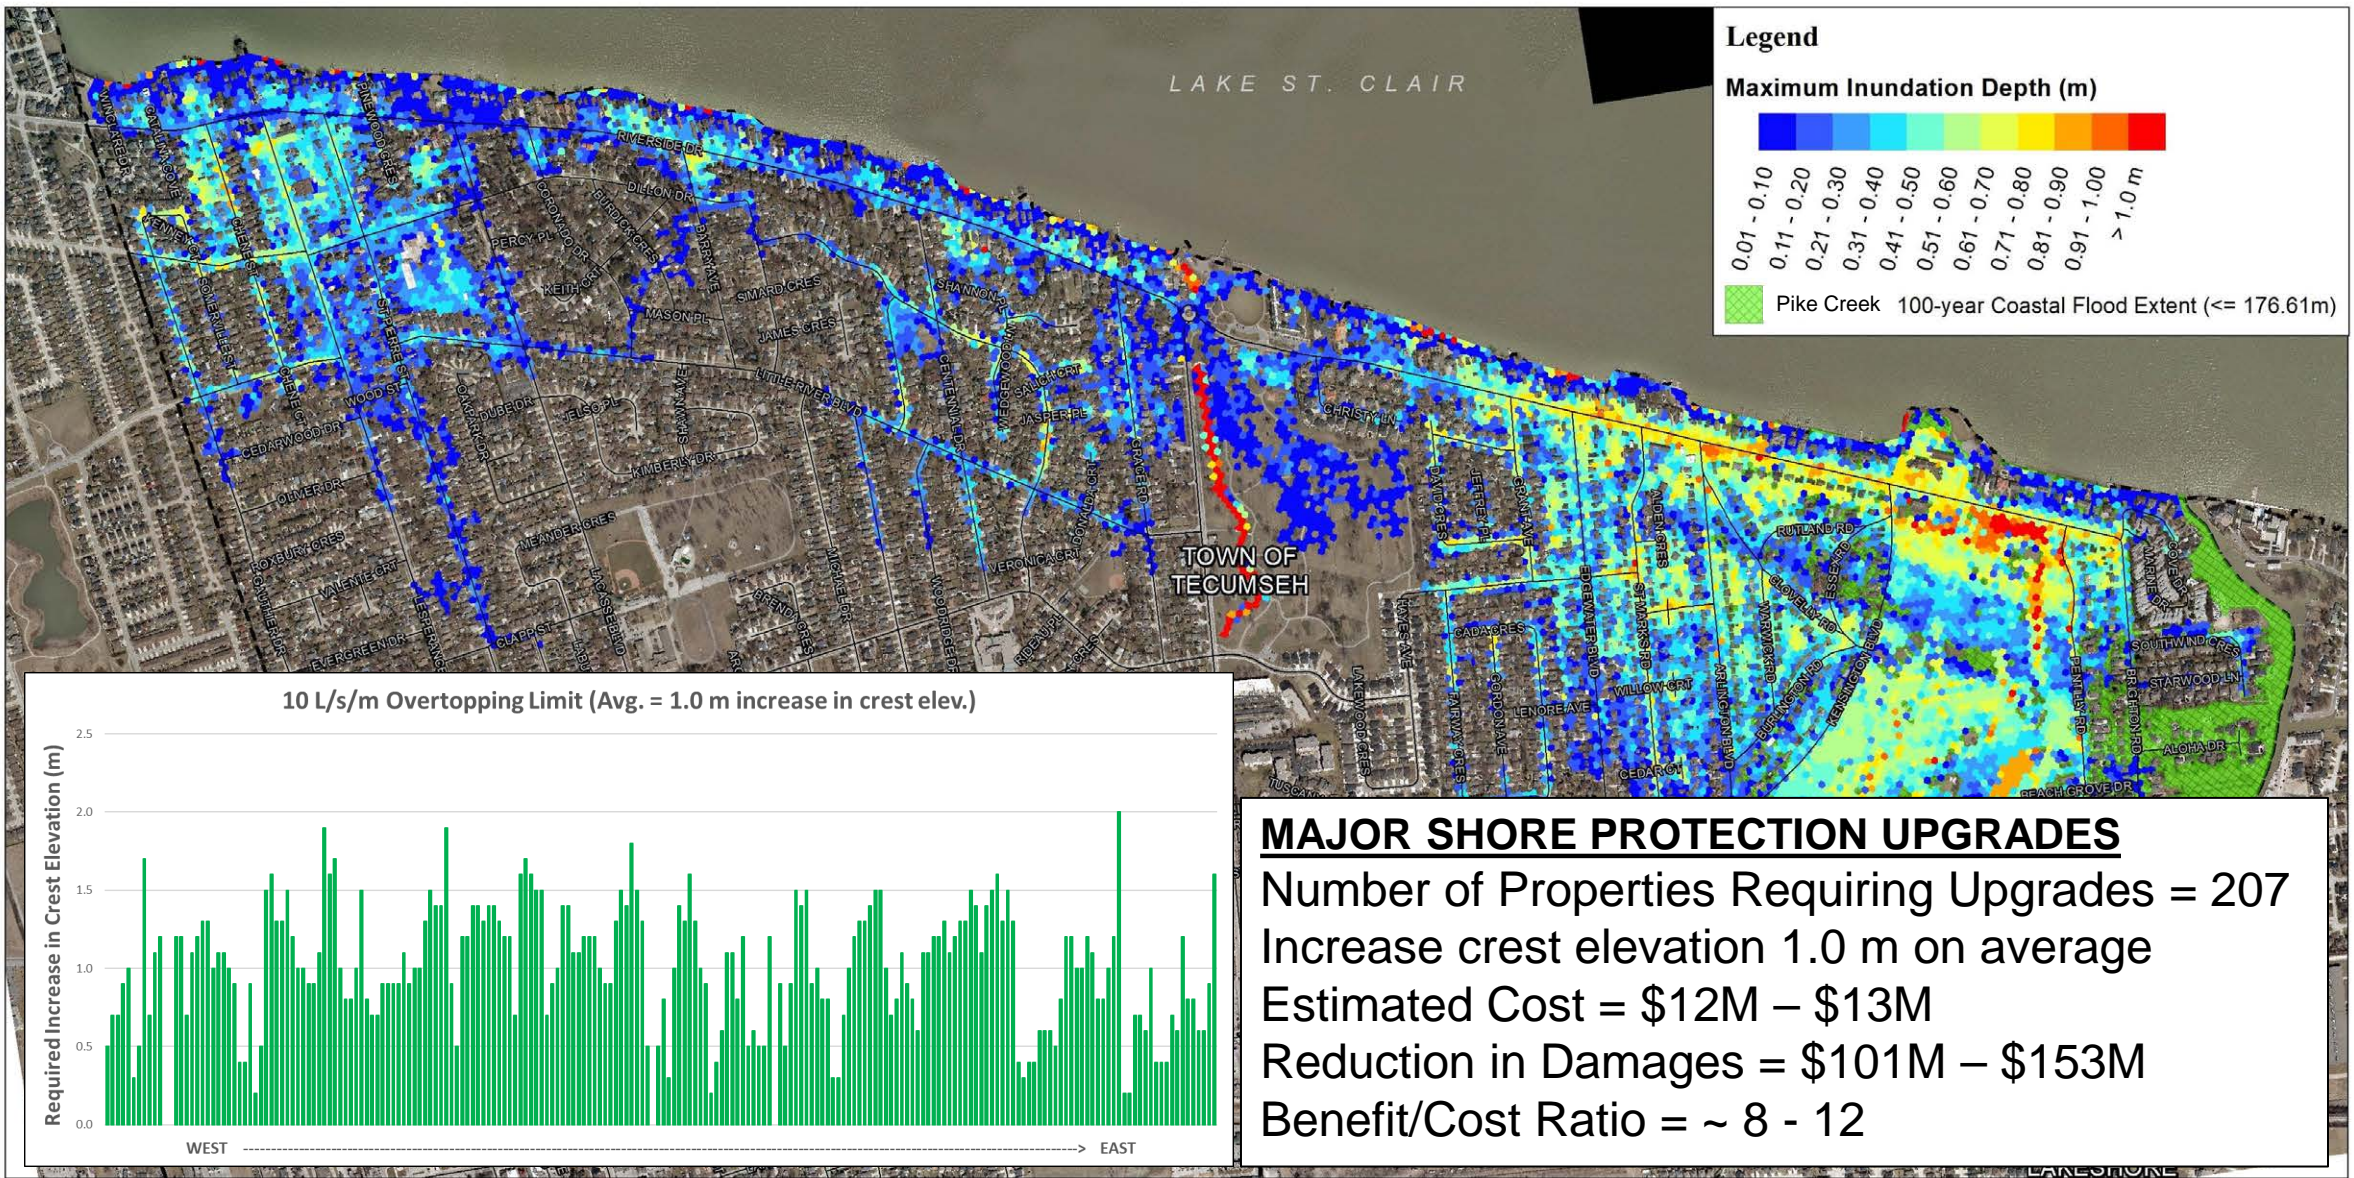

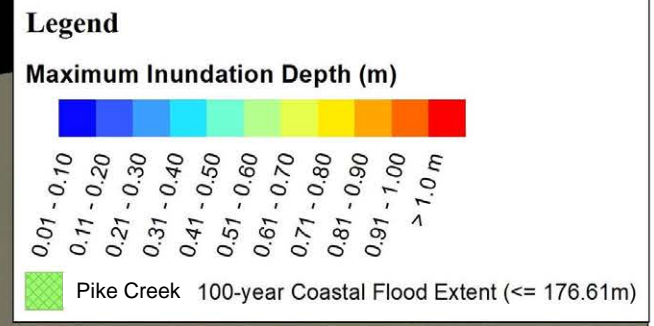

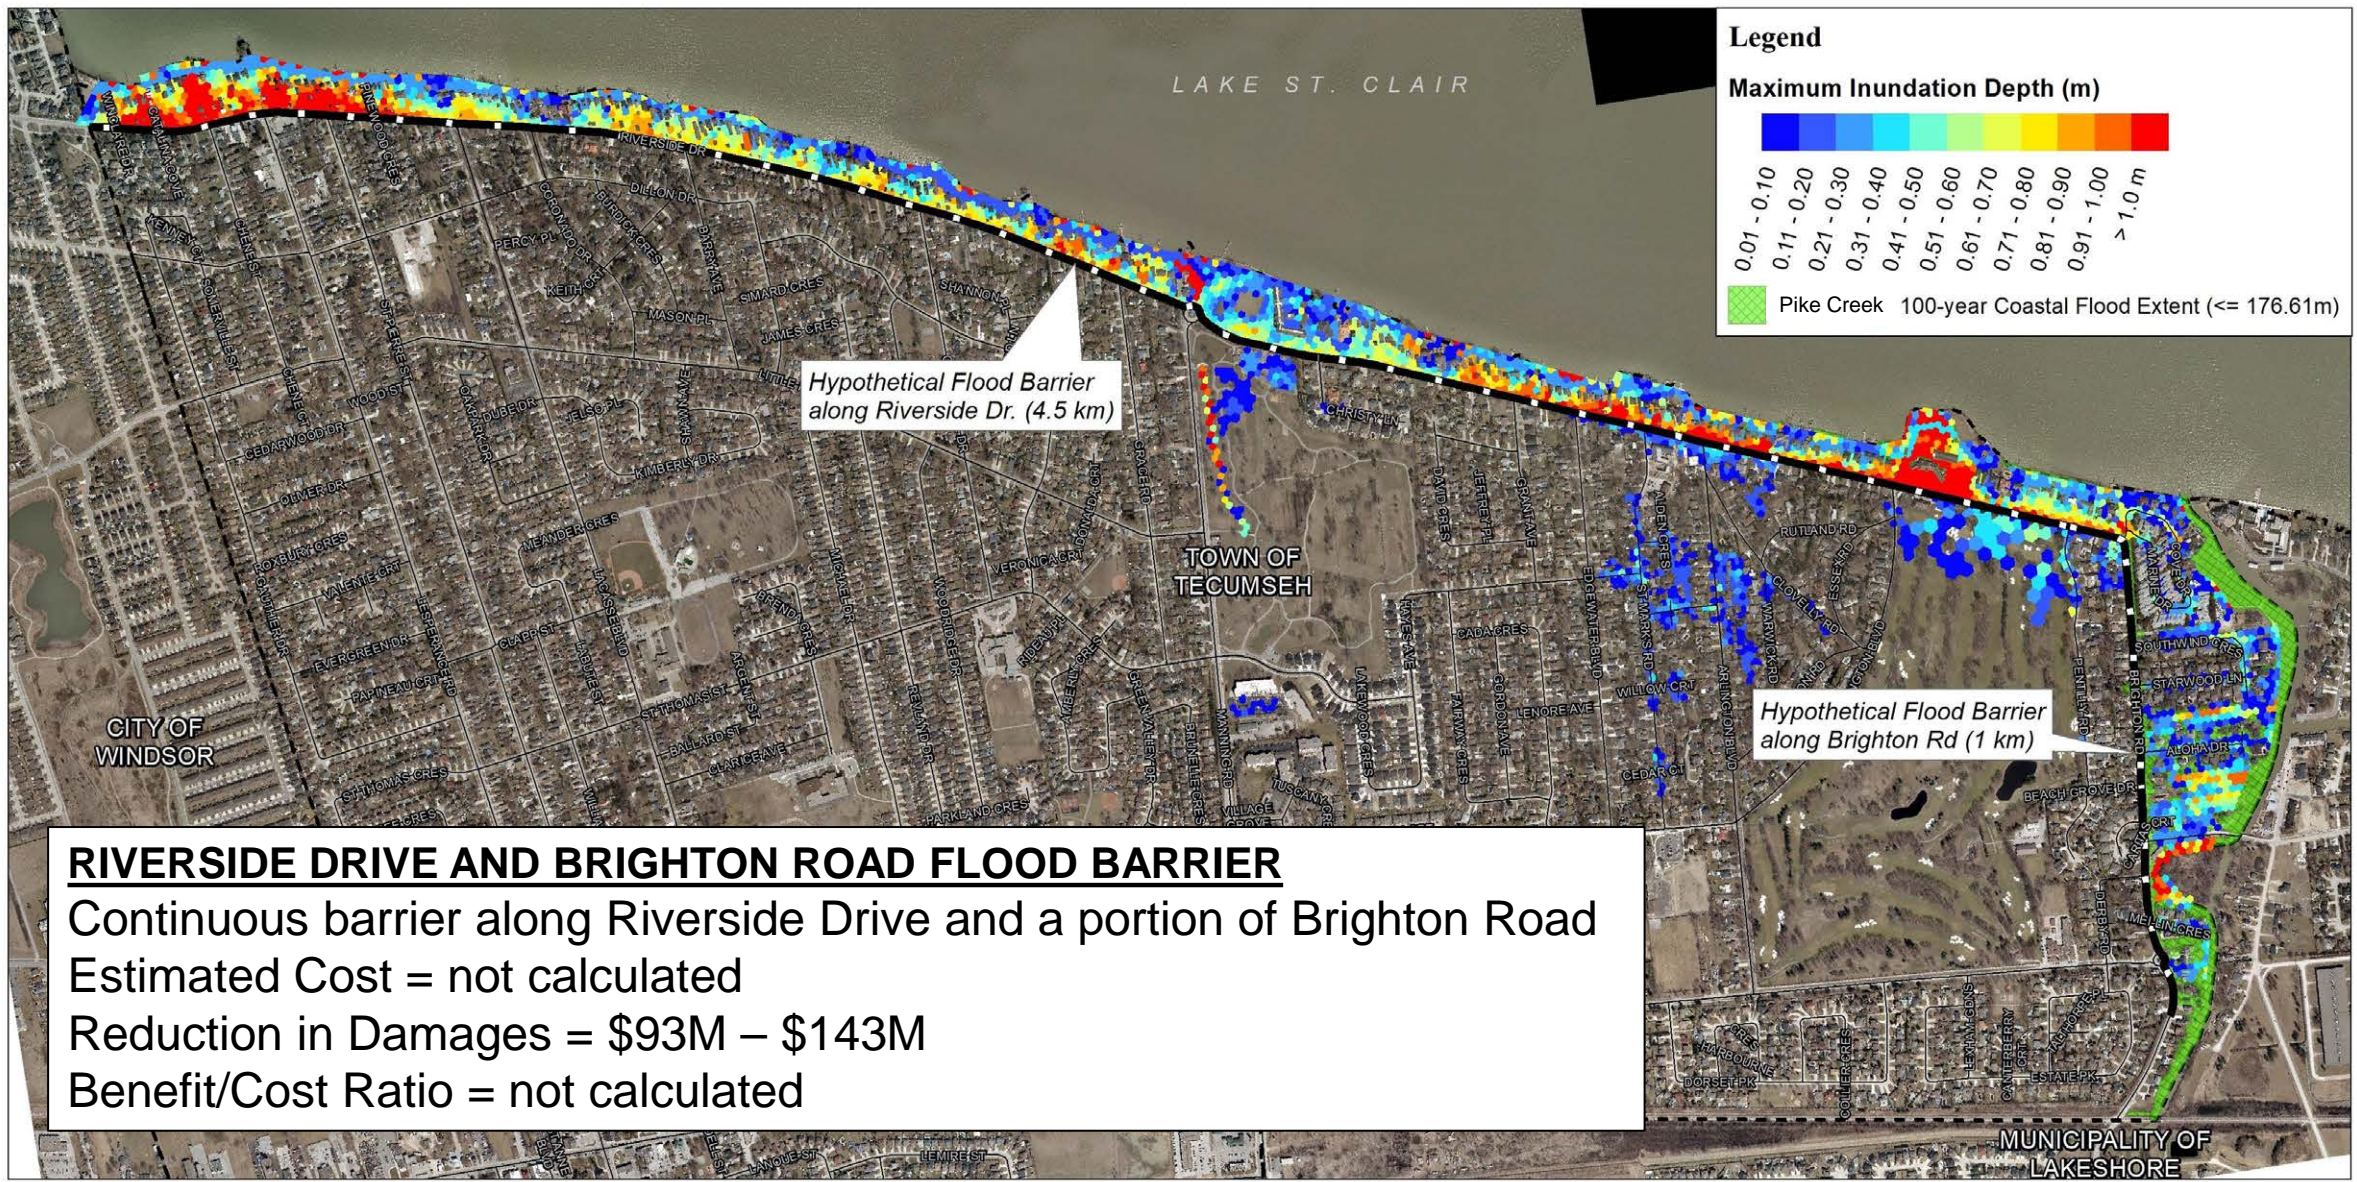

Scenario C
100-year Climate Change Coastal Flood with No Rain

Town of Tecumseh

- Notes:
- 1) Wave overtopping calculations by SJL Engineering
 - 2) Pike River flood analysis by Zuzek Inc.
 - 3) Interior flood modelling by Dillon Consulting
 - 4) 2019 aerial provided by the County of Essex

Hypothetical Flood Barrier along Riverside Dr. (4.5 km)

Hypothetical Flood Barrier along Brighton Rd (1 km)

RIVERSIDE DRIVE AND BRIGHTON ROAD FLOOD BARRIER
 Continuous barrier along Riverside Drive and a portion of Brighton Road
 Estimated Cost = not calculated
 Reduction in Damages = \$93M – \$143M
 Benefit/Cost Ratio = not calculated

PROTECTION STRATEGIES ASSUMED IN COSTING

Increase crest elevation
of vertical wall:

Basement Flooding During a Coastal Flood from Sanitary Sewer Surcharging and Lowest Opening

- During a coastal flood, the Hydraulic Grade Line (HGL) elevations (water levels) in some sanitary sewers may be above the basement floor level, which could lead to backflow and basement flooding north of County Road 22
- Basement windows and doors are potential pathways for building flooding
- Water shields and solid block windows

PUBLIC ENGAGEMENT

Summary of Public Information Centres (PICs)

- All virtual due to COVID19 (64, 45, 29 participants at PIC #1, #2, and #3)
- PIC#1 – what are the priorities for evaluating flood risk solutions?
 - 77% - long-term sustainable solutions
 - 69% - cost to landowners
 - 54% - cost to Town of Tecumseh
 - Other: standardized protection for shoreline and collaboration with neighbours/ERCA
- PIC#2 – ideas for short- and long-term solutions:
 - Continue upgrading pump stations
 - Increase the height of existing seawalls to reduce lake water flowing inland
 - Review existing develop policies (e.g., stop allowing basements in flood prone areas)
 - Construct inland temporary storage basins
 - Provide more assistance and ideas for landowners to prevent basement flooding

Summary of Public Information Centres (PICs)

- PIC#3 – what is your preferred long-term approach to reduce coastal flood risk?
 - 58% - a community scale program to upgrade the existing shoreline protection
 - 17% - a flood barrier along Riverside Drive and Brighton Road
 - 25% - other
 - Invest in less costly ways that don't create barriers along the shoreline
 - Consider the effect of a community shore protection program on property values
 - More investment and calculation of return on investment for storm and sanitary management
- The PICs provided insightful feedback that was considered in the development of the adaptation options
- While attendance was positive, given we were in the middle of the COVID19 pandemic and all meetings were online, more engagement is warranted

NEXT STEPS

Existing Activities and New Initiatives

- Continue with design work and construction plans to upgrade storm sewers infrastructure and pumping stations
- Continue with multi-faceted approach to reduce basement flooding from sanitary sewer backups
- New activities:
 - Work with emergency responders to evaluate flood depths that could limit access and update the Town Flood Response Plan as required
 - Develop guidance for landowners to reduce basement flooding threats from a coastal flooding event (e.g., floodproof basement windows and doors)
 - Complete further engagement with the landowners on the viability of a community-scale shoreline protection upgrade program, including improvements on private land. If positive support, future steps would include further planning and engineering design, fundraising, and securing agency approval for construction

QUESTIONS
