### SOME FUN MISCELLANEOUS EFFECTS:

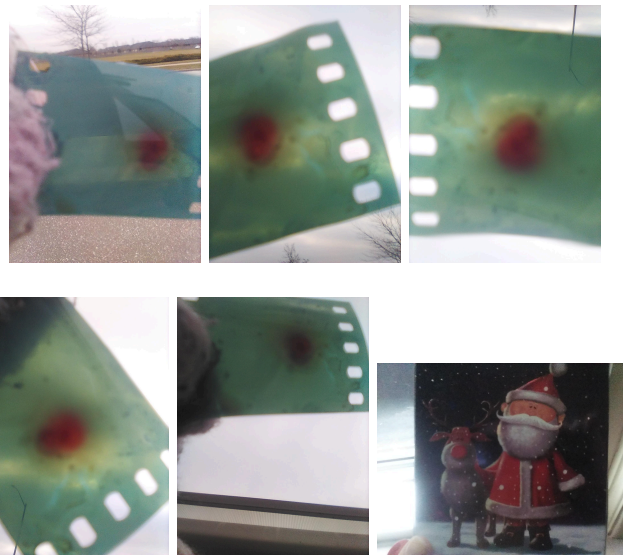

Figure. OUTDOOR: 'SNOUT and BLUE AREA': Shows the 'effect' for the film colorworks: Holofilm lensless neurobiology phonograph record, outdoor January 2, 2024(earliest cold weather for the recording, at an exercise physiology point), sketchwork. One layer of the Kodak holofilm whereupon another level varies the image.. The GEtv antenna blue light absorption hologram set in motion as red in film: is a working memory repeated phonograph record of what in the experiment I was building with the blue light absorption a red light bulb from the antenna and in regards to forever battery operated. However, an hour and a half later I was shopping at a Zehrs, before I had the opportunity to really look at the phonograph sketch work today. I arbitrarily purchased a kleenex Christmas box of Scotties because of the claymation design of Santa and a reindeer red nose and hologram wrap for which I had not seen. I noticed the color I used in the schematic for the records had a combination to reindeers nose and face, AND Santa's cheeks and face color together mix, with the yellow trim on top of the box cover. In fact, when you go to the tip top right area in the initial phonograph record, there is a vague deformation of the scottie dog, and it is in the second phonograph record atop you see Scotties face a little clearer right to the red nose... The object material that was used for the exposure over the blue light led running test: was actually an Adidas

running shoe that was a soiled white rubber sole, turned slightly yellow in a few areas. I was testing rubber and the blue light. But the size and shapes and color were too reminiscent of this scene I had just looked at before the exposure. One phonograph seems like a red headlamp upon a road without any cars, or on a trail in the air.

A NEURALINK type of interactivity

## INTRODUCTION

Hello. How are you? As I made reference to in a previous email send out- I was an entrepreneur in Canada who brought holograms money bills to the table. Among other legwork, I researched with the US inventor for the practical hologram for many years, beginning at 14 years of age; and he was later upon my small corporate board of directors with a brief history, as a youth entrepreneur in Ontario. Over the years since his passing, I have researched and reached a new concept to make a holofilm for thought. That we really are what we may see. These are lensless 3.4dimensional structures, images which are interferometric in measurement, and the big plan is the ability without computer/AI. So, I take my small GE blue light television antenna, along with the inventors (from archive American Banknote Holographics, ABNH) Kodak holofilm, and place milk over it nonuniformly, and maybe some tin foil and a fan, or wicker, ground glass, or microscope glass, pending what I think to do, and materials useful, never outline or shape of any idea or structure. This, exposes with the blue light and in a physiology run, sometimes I complete an exercise for a measurement in aging/cancer research etc. The outdoor phonograph recordings are like the thought placed over the blue light, or interesting, in an answer to one-in, incoherent light. Seeing a lensless hologram in incoherent light is like seeing a 3 d image in white diffuse light, and applicability in the brain.

The analogy for the use of an AI chip where a person with quadriplegia, can move a cursor on a screen or other devices, with basic thought: to current undiagnosed wave detections of things in disuse in a normal body function

or non functioning, without the help: was within the theory in unification, however now seems to be possible fairly consistent, as in talking with a blue light Television antenna, and exposure process.

An essentially natural phonograph recording is introduced without the use of a chip, however exposure using Kodak Hologram in angle position, no fluid dynamic, and reconstruction incoherent light under indoor lightbulb.

I recently wrote an ebook, now available, unedited, over Kindle Stores, titled, 'Tizzy Wheels, a Hologram Neurobiology Almanac'. (ALIAS ALKE MAY CEOLIN). This offers some samples of these; as well as over YouTube for motion picture holograms under searches 'Gadget Ceolin, motion picture holograms'.

The Milestone Meeting: 1-TEST EXAMPLE and APPROVAL:

THE HOLOGRAM ORNAMENT: DESIGN:

The idea is to have set up a small LCD ornament or 'FITBIT' watch to show this natural motion for a cursor and an old man walking in a park: James D. Watson (seems to be the absorbed blue light shadow) in the neurobiology thought processing and calculation with a notion of a loved one in partnership. He is able to move the cursor with his mouth and cane from the angles of absorption of the GE tv antenna blue light: the setup small lcd, Christmas display unit, for attracting shoppers in the district, on the periphery for the cooling or center of park to walk through: We may think of the walk of the distance with our loved ones: those neutrons stay forever.

ALSO: a second idea to include: simply for a motion picture, and/or for a nickelodeon website applicability? Meaning, to request a digital download design at the website where 50% proceeds, raise funds in part charity for senior care homes: 1 dollar per download at BIA and maybe other: there be an opportunity for a presentation this Tuesday, Dec 17, 2024 for ready purchase and preview, to be placed at your website for Friday Dec 20th, for the ornament in a little boxes hanger, and or, with the website download.

The price is cost negotiable. The base payment is 100 dollars, however if a Fitbit watch is preferred another 150 dollars we'll be added. If not this watch, then a pink like house encase with a cellphone

Lcd player in a small enclosed unit will be used, and an added 30-35dollars will be needed and for the lock mechanism to secure the ornament.

As for the DIGI DOWNLOAD: I have experience with companies to make test sample ads at website, and was interested to see how an experimental ad, as such on pay per view, would work, like nickelodeon; and a test lcd set up.

The Cost-WORKING COST NEGOTIABLE: Digital Download

The cost structure is based upon an amount for the design and labor, and a percent of the per per view royalties is 1.00 dollar per download, 30per cent to Miss Ceolin, 20 percent to BIA, and 50 percent to a senior care home charity raising funds for the cause. However BIA would need to have the technical capability to set up the digital download show.

## PART 2

### LCD RECORDER UNIT

ICE CUBE ORNAMENT(Polypropylene thread to hang on tree-or stand by the Feather ornament entering the Ticonderoga Park, Tecumseh): or under canopy areas of either the BIA Parkette or the Ticonderoga Park

With a FITBIT (or other) TYPE WATCH: OR PLAYER SIMILAR SIZE:

TO MAKE FOR SURPRISE PRESENTATION TODAY< DEC 17, 2024.

**The cube ornament would have 3 sides covered with the selected images**, one of the initial design above, split with logo on another face:, where one of the shadow design in the dark;

**The final facade for the small cube ornament** is a similar idea for thought proces., interaction: in a neurobiology holofilm GE tv antenna exposure.

OTHER MISC. EXAMPLES:

### FOR FUNNY- RECENT NEUROBIOLOGY PHONOGRAPH RECORDS THIS CHRISTMAS TO 'SHARE AND SHOW' HERE ONLY:

I was drinking a Tim Hortons coffee, and talking with a Christmas tree seller neighboring the shop. I had just completed a photo reconstruction in the cool air from an exercise run, and under a light bulb. I looked at the cup and then at the image where I did not see the cup or use any of the materials from or thought of any design:

RECENT SAMPLE STORY:I went for an exercise physiology run to a Tim Hortons earlier, in Town of Tecumseh: I was talking with the <christmas reseller nearby, with coffee cup in my habd after taking the phonograph shots in and outdoor that morning, and as I was talking to him I looked at the cup and checked the records, and this is whatI saw:

VAGUE SHADOWS TODAY AT TIM HORTONS COFFEE SHOP: Fig. Shadow backpack man foreground to a cut out side view of a tree, and the campfire- face image lit above near logo (above) is in mid air from the blue light led commercial store door.

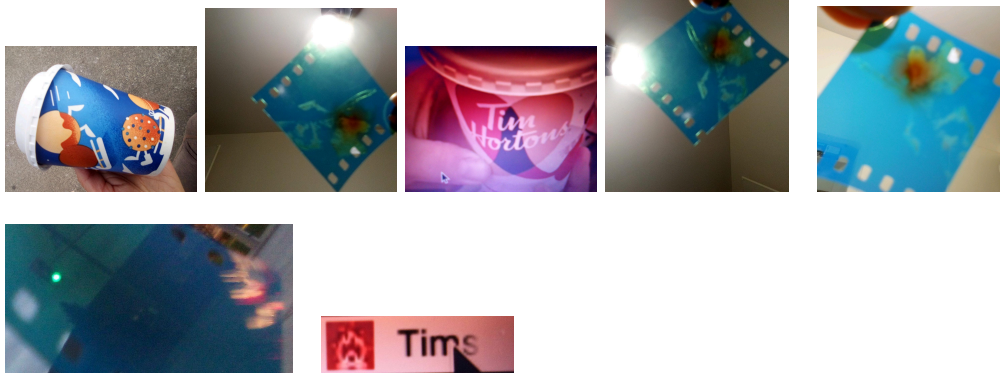

Fig. FIGURES: One facade of the ice cube ornament for the Christmas tree. The Neurobiology holofilm(as discussed below) was completed at a green traffic light in the early morning dark, DEC 11, 2024.

THESE GE KODAK HOLOFILM NEUROBIOLOGY IMAGE RECORDING ARE ROUGH DRAFT. THE FINAL ORNAMENT WITH FACADE WILL BE PROFESSIONALLY COMPLETED.

#### MILESTONES

A MEETING FOR THIS TUESDAY THE 17th, of DEC., FOR AGREEMENT, AND HOW TO SELL KNOW HOW. THE PROFESSIONALLY COMPLETED ICE CUBE ORNAMENT IMPLEMENTED AT PARK LESPERANCE AND TECUMSEH RD E., AND MAYBE FOR DIGITAL DOWNLOAD.

Some Winterish Miscellaneous other fun, experimental designs over 2-years: Doggie and Presents: overturned other friends:

Stationary Holofilm: Outdoor, lensless, incoherent holofilm last year. Scottie dog in deformation and part of the silver pin is left bottom corner in the open wagon door. The second experimental

depiction is iron shillings and static paper, with part of a dogs head and a lamb to the right, which pulled in thought and environment.

Fig. Outdoor enrichment, lensless incoherent lit, thought print of the GE blue light test exposures: Scottie Dog Angels: the scottie dog, cells, faces pending on the angle of view with white foam or red santa hats. A translucent mason jar to the left side cap showing, and gift.

Will there be operetta sound and music with the walk holofilm tbd.

Pending you wish to buy the ornament , I will have this ready Thursday at the office, and set up by Friday before noon at where decided at the Park.

The digital download I could assist to work on throughout the week if this is included.

As for any more design effort, I would like maybe aid to prep, for next year starting in 2025.

**Seasons Greetings,**

**--Tania May Ceolin, Windsor, ON**
