Subject: Floride in our water system

I am not in favour of fluoride in our water system. There is no scientific proof that this chemical works. Not all of our residents are on city water. We still have residents that are still on a well water system. What do you do with these people.

Cavities was still a problem when we did have fluoride in our water system. I would keep the fluoride out. The other question is how much of fluoridated water to we have to use to keep our teeth healthy. There is no answer.
