

Dear Mayor and Councillors

As you do your due diligence on the issue of artificial water fluoridation, please remember reading this document. Hopefully, you will not vote to put a toxic waste product, Hydrofluorosilicic acid, in our drinking water without any toxicology studies to show it is safe for human consumption. Not only is this a very harmful process, it is against our individual rights granted Canadians in the Canada Charter of Rights and Freedoms. We are not to be medicated, (fluoridation is medication to prevent cavities) without informed consent, dose control, (the more water you drink, the more fluoride, which is cumulative, you get), and no regulation. No one can rebuke you for refusing to medicate your neighbours. Toothpaste, dental varnishes and gels are effective and regulated, with no waste. 97% or more of fluoridated water is wasted down the drain and into the environment.

I realize that this information is almost too much to really accept, given we are told it is safe for human consumption by our MOH and dentists who quite possibly have accepted what they were told and not done their own due diligence or their position requires they support the policy among many other possible reasons for their position. Please do your own due diligence on this subject before you vote on it. [www.safewatermoncton.com](http://www.safewatermoncton.com) [www.fluoridealert.org](http://www.fluoridealert.org) [www.decisionduediligence.com](http://www.decisionduediligence.com)

Thank you in advance for voting for the well-being, increased IQ, and good health of yourself, your children and loved ones, as well as those who elected you, by voting to put artificial water fluoridation on hold using the Precautionary Principle, until it is proven safe for all citizens of Tecumseh.

Yours truly,

Kallie Miller, RN
