## Fluoridation opponents: Who they are, what they say

## Who opposes fluoridation?

- Some well-intentioned people who have been misled by what they have heard or read
- People who may be drawn to conspiracy theories
- Fluoride Action Network

### Royal Society of Chemistry

# We promote, support and celebrate chemistry

The world's leading chemistry community, advancing excellence in the chemical sciences

The Royal Society of Chemistry (RSC) is *neither* pro *nor* anti water fluoridation but *they are pro the accurate interpretation of scientific research*.

RSC Spokesperson Dr. Susan Vickers: "On the basis of published **robust** evidence water fluoridation **was both safe and effective in reducing dental decay**"

Source: Hull Science Festival, April 7, 2017, Barry Cockcroft, CBE, BDS, FDS (RCS Eng), FFGDP (UK), DDSc., Chief Dental Officer England 2005-2015

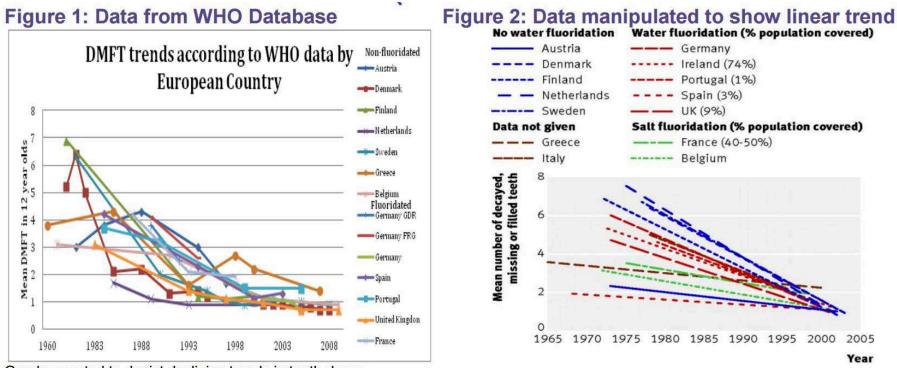

Paul Connett, PhD, Executive Director of the Fluoride Action Network, FAN, is a <u>Chemist</u> from the U.K. He opposes community water fluoridation

# He is out of step with Royal Society of Chemistry organization's 58,000 members

Claim: "Cavity rates coming down worldwide regardless of water fluoridation or not"

#### **FACTS:** This is manipulated World Health Organization data by CWF opponents

Graphs created to depict declining trends in tooth decay

Figure 1. Source: Data from the World Health Organization database. Available at <u>http://www.mah.se/CAPP/Country-Oral-Health-Profiles/</u>; Figure 2: Source: Cheng, KK, Chalmers, I, Sheldon, TA. Adding Fluoride to water supplies. *BMJ*; 2007;335(7622):699-702.

#### Bottom graph shows >25% cavity reduction when CWF is started

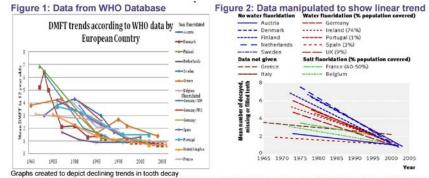

Figure 1. Source: Data from the World Health Organization database. Available at <a href="http://www.mah.se/CAPP/Country-Oral-Health-Profiles/">http://www.mah.se/CAPP/Country-Oral-Health-Profiles/</a>; Figure 2: Source: Cheng, KK, Chalmers, I, Sheldon, TA. Adding Fluoride to water supplies. *BMJ*; 2007;335(7622):699-702.

Figure 3: Mean DMFT 12 Year olds in Ireland by Water Fluoridation Status

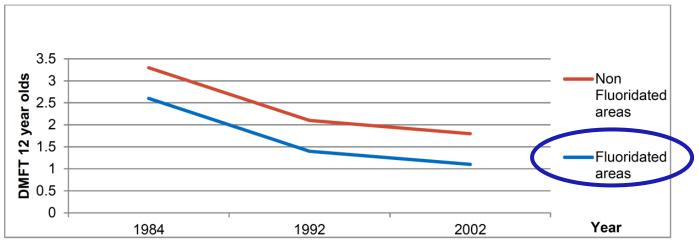

Figure 3: Data from the World Health Organization database. Available at http://www.mah.se/CAPP/Country-Oral-Health-Profiles/

#### **CLAIM:** Europe is 97% fluoridation-free

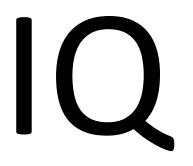

#### Don't be misled:

- Fluoridated water reaches
  13 million people in England,
  Ireland and Spain.
- Fluoridated salt reaches over
  75 million in Germany, France,
  Belgium and other countries.
- Nearly all European nations use fluoride-rinse programs, fluoridated milk or other targeted fluoride programs.

(**Source:** World Health Organization literature and "Salt Fluoridation in Europe and in Latin America," Wirtschaft, March 2011.)

- Over the past 100 years, IQ in the U.S. has risen nearly **30 points**
- "Flynn Effect" named after Dr. James Flynn who discovered this >30 years ago

http://www.apa.org/monitor/2013/03/smarter.aspx

#### 38 year Study Finds No Association Between IQ in CWF vs Different Fluoride Levels

#### Community Water Fluoridation and Intelligence: Prospective Study in New Zealand

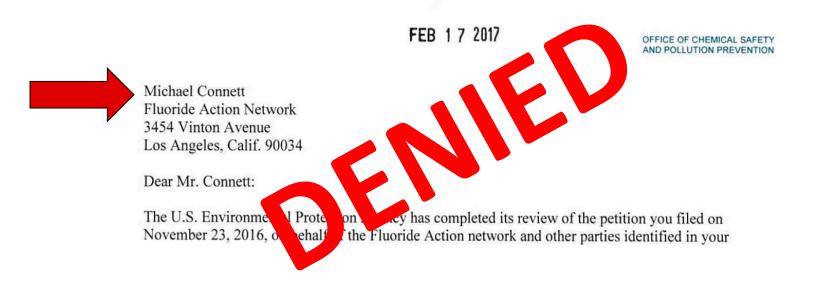

Jonathan M. Broadbent, PhD, W. Murray Thomson, PhD, Sandhya Ramrakha, PhD, Terrie E. Moffitt, PhD, Jiaxu Zeng, PhD, Lyndie A. Foster Page, PhD, and Richie Poulton, PhD

- Over 1,000 children studied over 38 years
- No clear differences in IQ because of fluoride exposure were noted

## EPA Denies Latest Petition from Fluoridation Opponents

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY WASHINGTON, D.C. 20460

# **CLAIM:** Fluoride has a neurotoxic effect

- In 2017, EPA ruled that this petition <u>"has not set forth a scientifically</u> <u>defensible basis</u> to conclude that any persons have suffered neurotoxic harm as a result of exposure to fluoride" through water fluoridation.
- EPA stated that many studies cited by critics were previously found to "pose a very serious overall risk of bias" because of their methodology or data reporting.

#### ENVIRONMENTAL PROTECTION AGENCY

#### 40 CFR Chapter I

[EPA-HQ-OPPT-2016-0763; FRL-9959-74]

#### Fluoride Chemicals in Drinking Water; TSCA Section 21 Petition; Reasons for Agency Response

AGENCY: Environmental Protection Agency (EPA). ACTION: Petition; reasons for Agency response.

SUMMARY: This document announces the availability of EPA's response to a petition it received on November 23, 2016, under section 21 of the Toxic Substances Control Act (TSCA). The TSCA section 21 petition was received from the Fluoride Action Network, Food & Water Watch, Organic Consumers Association, the American Academy of Environmental Medicine, the International Academy of Oral Medicine and Toxicology, and other individual petitioners. The TSCA section 21 petition requested that EPA exercise its authority under TSCA section 6 to "prohibit the purposeful addition of fluoridation chemicals to U.S. water supplies." After careful consideration, EPA has denied the TSCA section 21 petition for the reasons discussed in this document.

(**Source:** EPA's response to the petition seeking to ban a primary type of fluoride was published by the Federal Register, Feb. 27, 2017; the original petition was filed on November 23, 2016, under the Toxic Substances Control Act.)

#### FAN Petitioned the National Toxicology Program – Neurotoxic Effect

### NEW FLUORIDE/BRAIN STUDY COULD END Fluoridation

Fluoride Action Network | December 11, 2015

NTP Proposes Landmark Fluoride/Brain Study

Thanks to your support, the Fluoride Action Network (FAN) has been able to raise public awareness about the serious, permanent risks that fluoride poses to the **developing** brain. This was once a lonely battle — but, fortunately, that is starting to change.

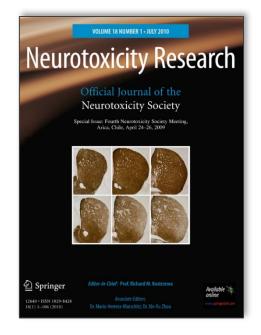

The National Toxicology Program (NTP) is an interagency program run by the United States Department of Health and Human Services to coordinate, evaluate, and report on toxicology within public agencies.

## **Study Results**

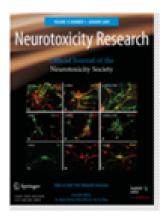

- Researchers with the National Toxicology Program led an animal study to examine the impact of fluoride in water and food.
- They found "no exposure-related differences in motor, sensory, or learning and memory performance" for any of the **nine** different tests they conducted.

 The NTP study: thyroid hormone levels were not affected — even at levels of 0, 10 or 20 parts per million of fluoride in water.

(Source: C.A. McPherson et al., "An Evaluation of Neurotoxicity Following Fluoride Exposure from Gestational Through Adult Ages in Long-Evans Hooded Rats," Neurotoxicity Research, published online on Feb. 5, 2018) https://www.ncbi.nlm.nih.gov/pubmed/29404855

Neurotoxicity Research

#### On over 10 different tests no difference in:

- learning
- memory
- sensory performance
- place preference
- pain perception
- motor performance
- nerve cell death
- brain cell microscopy
- Thyroid hormones
- Heart, liver, kidney, and sexual organs

(Source: C.A. McPherson et al., "An Evaluation of Neurotoxicity Following Fluoride Exposure from Gestational Through Adult Ages in Long-Evans Hooded Rats," Neurotoxicity Research, published online on Feb. 5, 2018)

#### CLAIM: Mexican study says fluoride is a neurotoxin

#### FACTS:

This study reported that higher prenatal fluoride exposure "was associated with lower scores on tests of cognitive function" in children.

(Sources: M. Bashash et al., "Prenatal Fluoride Exposure and Cognitive Outcomes in Children at 4 and 6–12 Years of Age in Mexico," Environmental Health Perspectives, Sept. 2017.)

Fluoridated salt is widely used in Mexico and many areas have water with natural fluoride levels **above** optimal

#### A closer look at the Mexican study

Coauthors of the study cautioned against reading too much into the findings:

- Morteza Bashash: "We need to do more work to identify the nature of the effect. And we have a lot of uncertainty in the results."
- Howard Hu: "[The study] needs to be reproduced in other populations by other scientists."
- Angeles Martinez-Mier: "We don't have the whole picture."

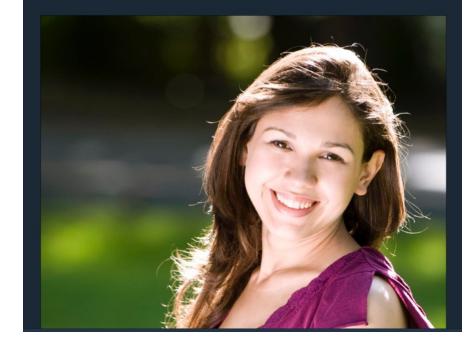

(Sources: Laird Harrison, "Association Reported Between Fluoride and Reduced IQ," Medscape, Oct. 2, 2017; Nadia Kounang, "Fluoride exposure in utero linked to lower IQ in kids, study says," CNN, September 21, 2017.)

Two days after the Mexican study was released, the leading U.S. organization of Ob-Gyns reaffirmed its support for pregnant women to drink fluoridated water

ACOG & @AmerDentalAssn recommend that #pregnant #women drink fluoridated water. The oral health consensus statement: acog.org/-/media/Depart...

(Source: Twitter message sent Sept. 22, 2017 by the American College of Obstetricians and Gynecologists)

Fluoride Content in Urine of Pregnant mothers – Must measure intakes to correlate with outputs

- Intakes not measured
- Foutput in urine measured
- Salt fluoridation, fluoride in drinking water, toothpaste
- 2. Canadian Study :
  - Intakes not measured
  - Foutput in urine measured
  - Water fluoridated areas, non-fluoridated, toothpaste

Similarities:

- Urine fluoride content from pregnant mothers were similar
- Outliers had ~4ppm of fluoride
- CWF can't be accounting for ~4ppm

#### A coauthor shares her perspective

"As an individual, I am happy to go on the record to say that I continue to support water fluoridation.

"You can also say that if I were pregnant today I would consume fluoridated water, and that if I lived in Mexico I would limit my salt intake."

**E. Angeles Martínez Mier**, DDS, MSD, PhD Professor and Chair, Department of Cariology, University of Indiana School of Dentistry

(Source: Email message from E. Angeles Martinez Mier to Dr. Johnny Johnson, Sept. 21, 2017)

## Switching Gears from CWF to the EPA's Maximum Contaminant Level of Fluoride in Water

## The EPA sets the maximum naturally occurring level of fluoride in water that is considered safe to drink

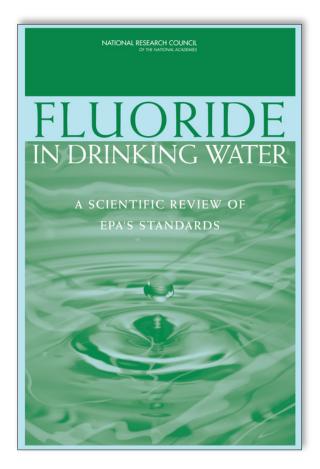

#### Claim: NRC's 2006 report shows CWF is harmful

This claim ignores what the NRC committee said in a summary of its report:

"... the committee's conclusions regarding the potential for adverse effects from fluoride at 2 to 4 mg/L in drinking water **do not apply** at the lower water fluoride levels commonly experienced by most U.S. citizens."

**This study was not about community water fluoridation** (p. 20)

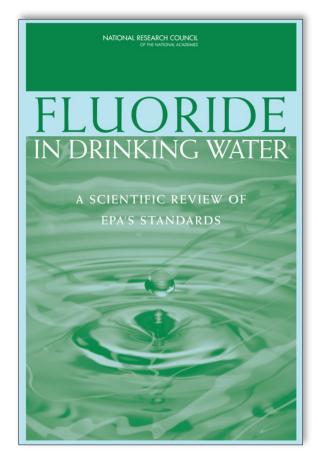

(Source: Report in Brief, "Fluoride in Drinking Water: A Scientific Review of EPA's Standards," NRC Committee, March 2006)

#### Claim: NRC's 2006 report shows CWF is harmful

As the report explained, the EPA's maximum limit on fluoride is "set at a concentration at which **no adverse health effects** are expected to occur and the margins of safety are judged 'adequate'. "

(**Source:** "Fluoride in Drinking Water: A Scientific Review of EPA's Standards," National Research Council, The National Academies Press, 2006)

Was there evidence at 4.0 ppm showing that fluoride had an effect on ...?

- Tooth enamel
- Liver 🗙
- Kidneys 🗙
- Endocrine system
- Gastrointestinal system 🗙
- Immune system

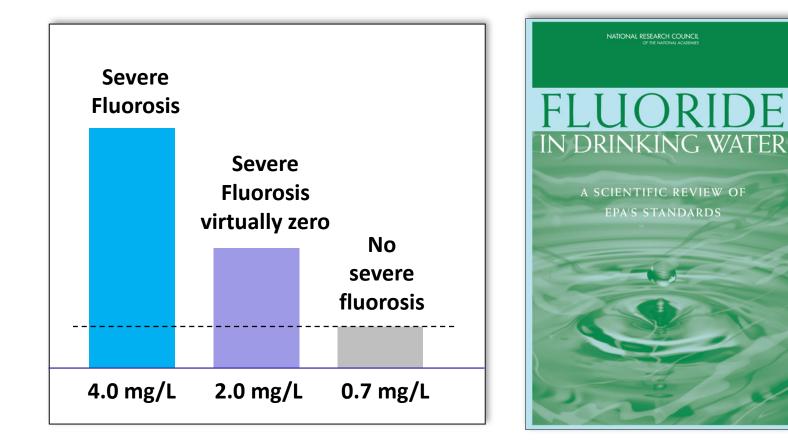

- Cancer X
- Musculoskeletal 🗙 system
- **Reproduction and** development 🗙
- Neurotoxicity and neurobehavioral
- Genetic damage X

(Source: "Fluoride in Drinking Water: A Scientific Review of EPA's Standards," National Research Council, The National Academies Press, 2006)

#### A closer look at fluoride levels

(**Source:** "Fluoride in Drinking Water: A Scientific Review of EPA's Standards," National Research Council, The National Academies Press, 2006)

## U.S. Community Preventive Services Task Force

(Note: studies used were evaluated by the Cochrane Oral Health Group and **approved**)

#### **Recommendations Reaffirmed 2013:**

- 1. Community Water Fluoridation is *RECOMMENDED* based on *STRONG EVIDENCE* of effectiveness in reducing cavities across populations.
- 2. Evidence shows the **prevalence of** *cavities* is *substantially lower* in communities with community water fluoridation (CWF)
- 3. There is **NO EVIDENCE** that CWF results in **severe fluorosis**.

### Claim: Fluorosis is a "toxic" effect **FACT:** False

- Dental fluorosis is a change in the appearance of tooth enamel due to a high level of exposure to fluoride during the tooth-forming years.
- Dental fluorosis is typically a mild cosmetic effect that:
  - o does <u>not</u> cause pain
  - does <u>not</u> affect the health or function of the teeth It's so subtle most people don't even notice fluorosis
- Dental fluorosis can **only** occur **up to age 8**, while permanent teeth are developing under the gums
- It does NOT occur in adults

(**Sources:** CDC's "Fluorosis" web page, updated June 1, 2016; R.K. Celeste et al., "Independent and Additive Effects of Different Sources of Fluoride and Dental Fluorosis," Pediatric Dentistry, Vol. 38, No. 3, May-June 2016)

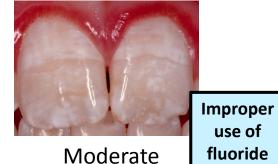

#### Variations in tooth enamel (fluorosis)

Normal

Very Mild

fluoride products

Questionable

Mild

Severe Not caused by CWF

(Source: Information from the Centers for Disease Control and Prevention's website, accessed in October 2017 at http://www.cdc.gov/fluoridation/faqs/dental\_fluorosis/index.htm)

Claim: "Randomized Control Trials (RCT) never been done on CWF"

FACTS: RCT'S for CWF aren't feasible-Cochrane Collaboration

#### Water Fluoridation Studies are Observational Designs

**Observational**: an effect is found, and the cause is researched

Same study design used to determine causes for:

✓ Smoking and lung disease

✓ Sexually Transmitted Diseases

✓ Chronic Alcohol Use

# **CLAIM:** The Cochrane review found no evidence that fluoridation works

• Wrong. Cochrane found that fluoridation reduced decay in baby teeth by 35% and reduced decay in permanent teeth by 26%.

 CDC: Cochrane used strict criteria that excluded "many valid, peer-reviewed studies (that) document the effectiveness of community water fluoridation."

(**Sources:** Centers for Disease Control and Prevention, "Ten Great Public Health Achievements in the 20th Century," web content updated on April 26, 2013; CDC's 2014 Fluoridation Statistics; CDC, "Water Fluoridation Basics," web content updated on June 17, 2016.)

#### **Claim:** The FDA has never approved fluoride

The FDA *has* approved fluoride for use in bottled water for cavity reduction.

The EPA, not the FDA, has jurisdiction over tap water.

(Source: Article posted on InfoWars website, June 2012, and accessed at http://www.infowars.com/u-swater-fluoridation-began-in-1945-never-fda-approved-yet-continues-today/; "4. What are EPA's drinking water regulations for fluoride?" EPA website; "Health Claim Notification for Fluoridated Water and Reduced Risk of Dental Caries," U.S. Food and Drug Administration, updated on April 1, 2015) **CLAIM:** Fluoride works topically, not by being swallowed **FALSE:** Fluoride works <u>both</u> topically and systemically

Studies show fluoride works through **both** topical and systemic effects.

- It's beneficial <u>before</u> teeth fully appear in a child's mouth
- Continuous exposure to small amounts of fluoride helps <u>both adults and children</u> by remineralizing the tooth enamel.

(**Sources:** Numerous studies include: K.A. Singh et al., "Relative Effects of Pre- and Posteruption Water Fluoride on Caries Experience of Permanent First Molars," Journal of Public Health Dentistry, 2003, Vol. 63, No. 1; "Fluoridation Basics," Centers for Disease Control and Prevention, 2016.)

### Claim: CWF is forcible "mass medication"

#### FALSE:

- America has a tradition of fortifying foods and drinks to improve human health:
  - ✓ Folic acid
  - 🗸 Vitamin D
  - Calcium
  - Iodine

- U.S. courts have consistently rejected this argument against fluoridation
- Medications are used to treat a health problem.
  Fluoridation (like chlorination) is about prevention

# **Claim:** Mother nature protects babies from fluoride **FALSE:**

- Breast feeding is encouraged by leading scientific groups (nutrition, antibodies, etc.).
- **However**... breast milk is not perfect. For example, it lacks sufficient:
  - Vitamin D (brittle bones)
  - Vitamin K (clotting)
  - Iron (anemia)

Infants are recommended to start supplements of these shortly after birth.

Claim: "The ADA warns parents not to add fluoridated water to infant formula because of its harmful effects"

## **FACTS:** False

#### **ADA & CDC recommendations:**

- **Continued use** of liquid or powdered concentrate infant formulas reconstituted with optimally fluoridated drinking water while being cognizant of the potential risk for *mild* enamel fluorosis
- Use ready-to-feed formula or liquid or powdered concentrate formula reconstituted with water that is either fluoride-free or has low concentrations of fluoride when the potential risk for *mild* enamel fluorosis may be a concern for parents

Claim: "Fluoridation chemicals are different from naturally occurring fluoride"

# FACTS: FALSE

#### Fluoride Additives <u>Are Not Different</u> From Natural Fluoride

Some consumers have questioned whether fluoride from natural groundwater sources, such as calcium fluoride, is better than fluorides added "artificially," such as FSA or sodium fluoride. Two recent scientific studies demonstrate that the same fluoride ion is present in naturally occurring fluoride or in fluoride drinking water additives and that no intermediates or other products were observed at pH levels as low as 3.5. In addition, the metabolism of fluoride does not differ depending on the chemical compound used or whether the fluoride is present naturally or added to the water supply.

Claim: "The fluoride additives are not Pharmaceutical grade"

FACTS: Not appropriate

#### **United States Pharmacopeia (USP) Grade Fluoride Products**

Some have suggested that pharmaceutical grade fluoride additives should be used for water fluoridation. **Pharmaceutical** grading standards used in formulating prescription drugs are not appropriate for water fluoridation additives. If applied, those standards could actually exceed the amount of impurities allowed by AWWA and NSF/ANSI in drinking water.

# FACTS:

- There is no need to control water intake. Fluoride from *dental products, primarily swallowed toothpaste by young children,* needs to be used appropriately as they are a *major contributor* to fluorosis, even in areas *without* fluoridation.
- There is a history of over 70 years of safety record of fluoridation in the United States.
- NRC Report showed that severe fluorosis <u>near zero</u> below 2mg/L (2ppm)
- EPA's analysis provides that the proposed recommendation of 0.7 mg/L of F<sup>-</sup> will protect against <u>any</u> potential adverse health effects.

# **CLAIM:** There are better alternatives **WRONG!**

"A significant advantage of water fluoridation is that anyone, regardless of socioeconomic level, can enjoy these health benefits during their daily lives ... simply by drinking fluoridated water or beverages prepared with fluoridated water."

Dr. David Satcher, U.S. Surgeon General 1998-2002

(**Source:** David Satcher, "2001 Surgeon General's Statement on Community Water Fluoridation," Centers for Disease Control and Prevention, accessed in Oct. 2017.)

## **CLAIM:** There are better alternatives

- Wrong. Fluoridation is the single most cost-effective way to prevent tooth decay.
- Fluoride toothpaste is **not** a replacement for CWF. Both are needed

- Fluoride supplements: Compliance is a problem
- Supplements and school-based dental programs don't serve adults, whose oral health needs can increase as they age.

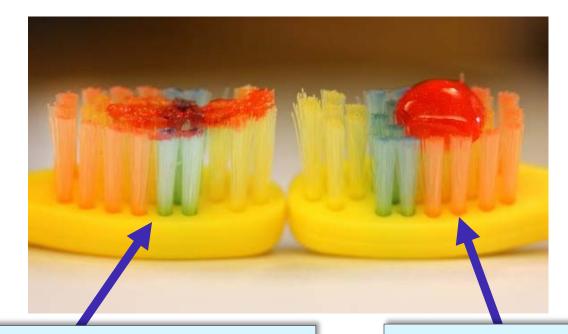

Claim: "Communities are putting an end to fluoridation.."

## FACT: False

- The percent of the U.S. population on community water systems *increased* from 68.7% in 2004 to 74.4% in 2014 (5.7%)
- In 2014, >211 million people in the U.S. population on community water systems had access to fluoridated watercontinuing the historic growth
- Community water fluoridation has continued to increase every year since it was introduced in 1945

## The right amount of fluoride toothpaste

Once teeth appear, parents should use a smear of fluoride toothpaste (roughly a grain of rice) on their child's brush until age 3 For ages 3 to 6, parents should **use a pea-sized amount** on the toothbrush

(Sources: "ADA Uses Fluoride Toothpaste to Fight High Cavity Rate in Children," a press release issued by the American Dental Association, Feb. 10, 2014; Catherine Saint Louis, "Dental Group Advises Fluoride Toothpaste Before Age 2," New York Times, Feb. 12, 2014.)

## Which would you rather have?

OR

#### Cavities

Mild Fluorosis

# Summary

Community Water Fluoridation:

- 1. Is **Effective, Safe,** and most **Cost Efficient** means to reach everyone in the community with its cavity fighting benefits
- 2. <u>No adverse health effects from drinking fluoridated water</u>
- 3. Benefits all members of the community, regardless of age, race, SES, ethnicity, access to dental care
- For pennies/year/person, \$32.19 in dental treatment costs/person/year are avoided
- Is <u>recommended</u> by Health Canada, CPS, AAP, CDC, CDA, ADA, CMA, AMA, Mayo Clinic, WHO, and leading health and scientific organizations around the world
