Subject: Question

Hello,

Let's think about this:

Shouldn't our public water supply be safe for everyone???

Here are the stories of two of the many people who came forward five years ago. □

The video is only about 5 minutes long.

There is no argument that infants under 6 months should NOT swallow fluoride. Council needs to put warnings on water bills for parents of infants to find another source of water for mixing infant formula. And the Health unit could start a breast-feeding campaign because mothers' bodies filter fluoride out of breastmilk. Just some important things to think about, if fluoridation is reintroduced.

Happy New Year,

Ayesha Drouillard
Resident of Ward 2
